

**THIRTEENTH CENSUS OF THE UNITED STATES
TAKEN IN 1910**

**STATISTICS
FOR
SOUTH DAKOTA**

THIRTEENTH CENSUS PUBLICATIONS.

The results of the Thirteenth Decennial Census will be published in two forms: A comprehensive report in 12 volumes, and a condensed report, the Abstract of the Thirteenth Census, which is being issued with Supplements for the different states.

The material contained in the Supplements embraces for each state all of the census results published concerning the state, its counties, cities, and other civil divisions, except as to occupations. This material is bound up in one volume with the Abstract of the Thirteenth Decennial Census. The result is a series of editions of the Abstract each with a different State Supplement, with the purpose of furnishing those who receive the Abstract with the statistics of the state in which they reside.

The material contained in the various State Supplements will also be printed by subjects in the final reports. The chapters relating to Population for all of the states will be assembled in two volumes of the final report on Population; those relating to Agriculture, in two volumes of the final report on that subject; those relating to Manufactures, in one volume of the final report on Manufactures; and those relating to Mining, in the final report on Mining.

The present pamphlet is a reprint of the State Supplement. It contains no material which is not available in the bound volume of the Abstract for the state to which it refers, or in the complete final report of the Thirteenth Census, and has been issued in a very limited edition for special purposes.

SUPPLEMENT FOR SOUTH DAKOTA

POPULATION

MINES AND QUARRIES

CHAPTER 1.

NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of South Dakota, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 573) shows the population of South Dakota, distributed according to counties and minor civil divisions, at the last three Federal censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical, with the exception of a few counties in which most of the primary divisions are arranged numerically. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. This is for the most part due to the fact that some minor civil divisions which were in existence in 1890 or 1900 were not in existence in 1910, their territory having been annexed to other divisions or taken to form new divisions. In a few cases the population of certain divisions returned separately at one census was returned in combination with other divisions at another census.

Table 2 (p. 586) shows the cities and the incorporated towns and villages in South Dakota, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of South Dakota, by counties, at each of the last five Federal censuses, from 1870 to

1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two Federal censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, school districts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions *as they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present

HISTORICAL NOTE.—The name Dakota was originally that of an Indian nation which inhabited the region now comprising North and South Dakota, Montana, and Minnesota. The word signifies friends, allies, or confederates. French explorers and traders entered the present state of South Dakota early in the eighteenth century and established a number of trading posts, but the first explorers to make an authentic and trustworthy report regarding the Dakota country were Lewis and Clark, who, at the head of a United States Government expedition, ascended the Missouri River in 1804, returning in 1806. The first permanent settlement was made at Sioux Falls in 1857.

The area now known as South Dakota was originally a part of the Louisiana region, which was ceded by France to Spain in 1762, retroceded in 1800, and purchased by the United States in 1803.

The region now constituting South Dakota belonged to the district of Louisiana from 1804 to 1805, to the territory of Louisiana from 1805 to 1812, and to the territory of Missouri from 1812 to 1834. From 1834 to 1854 the part west of the Missouri and White Earth Rivers was part of the Indian country, and from 1854 to 1861 a part of Nebraska territory. The part east of these rivers belonged successively to the

territories of Michigan (1834-1836), Wisconsin (1836-1838), Iowa (1838-1849), and Minnesota (1849-1858). Upon the admission of the state of Minnesota, in 1858, the region lying between that state and the Missouri and White Earth Rivers was left without legal name or existence, and it so remained until the territory of Dakota was created.

In 1861 the region extending from the Koyasapa, Niobrara, and Missouri Rivers and the forty-third parallel to the Canadian boundary and from Minnesota to the Rocky Mountains, was organized as Dakota territory, which thus included most of the present state of Montana and nearly half of what is now Wyoming. In 1863 when Idaho territory was formed the region lying between the Rocky Mountains and the present western boundaries of North and South Dakota was included. Most of the present area of Wyoming was transferred from Idaho to Dakota in 1864, and continued as a part of the latter territory until 1868, when Wyoming territory was organized. In 1882 a small tract of land lying south of the forty-third parallel and west of the Missouri River was transferred from Dakota to Nebraska.

In October, 1889, South Dakota adopted a constitution, and in the following November, with boundaries as at present, became a state of the Union.

fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the terri-

tory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two Federal censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of South Dakota is 583,888. Compared with a population of 401,570 in 1900, this represents an increase during the last decade of 182,318, or 45.4 per cent. During the same period the total population of the United States increased 21 per cent. The growth of the state was much more rapid than during the preceding

decade, 1890-1900, when the rate was 15.2 per cent. The following table shows the population of South Dakota at each Federal census from 1890 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	583,888	182,318	45.4	21.0
1900.....	401,570	52,970	15.2	20.7
1890.....	¹ 348,600			

¹ Includes population (19,792) of Indian reservations specially enumerated.

South Dakota was admitted as a state in 1889 and appears in the Federal census reports for the first time in 1890. That part of Dakota territory which now comprises the state of South Dakota had in 1870 a population of 11,776, which had increased to 98,268 in 1880. In 1890 the population of the state was 348,600, and since that time it has increased 235,288, of which increase more than three-fourths was during the last decade. The rate of growth for the state during this 20-year period was 67.5 per cent, while the rate for the United States was 46.1 per cent.

Principal cities.—South Dakota has 89 cities. Sioux Falls, the largest, has a population of 14,094, and Aberdeen, the second city, a population of 10,753. There are also 4 cities having from 5,000 to 10,000, 7 having from 2,500 to 5,000, and 76 having less than

2,500 inhabitants. The aggregate population of the 89 cities is 147,226, or 25.2 per cent of the total population of the state.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table following shows the population of the 6 cities having in 1910 over 5,000 inhabitants, as reported at each Federal census since their incorporation either as cities, towns, or villages, together with the increase during each decade.

Of the cities included in this table, Aberdeen, Huron, and Watertown show rates of increase for the last decade of more than 100 per cent. Aberdeen shows the highest rate of increase during the last decade, namely, 163.1 per cent, and Lead the lowest, 35.1 per cent.

¹ A minus sign (—) denotes decrease.

Counties.—South Dakota has 67 counties, of which 57 are organized, while 10 are unorganized and form parts of Indian reservations. The population is shown separately for 63 counties only, as it is impos-

sible to show by counties the population included in Pine Ridge Indian Reservation. The population of the 63 counties ranges from 252 in Sterling County to 29,631 in Minnehaha County.

The following territorial changes have been made in the organized counties of South Dakota since 1900: Corson County was organized in 1909 from that part of Standing Rock Indian Reservation located in South Dakota; Tripp County was organized in 1909 from part of Rosebud Indian Reservation; Harding and Perkins Counties were organized in 1909 from parts of Butte County; and part of Union County was ceded in 1908 to the state of Nebraska.

Partly because of the formation of new counties since 1900, partly because certain counties which were returned separately in 1910 were returned under Indian reservations in 1900, and partly because the population in 1910 of certain counties could not be separated from that of the Indian reservations in which they were located, the extent of increase or decrease in population can be reckoned separately for only 52 counties. In order to determine the increase or decrease in the population of the remaining 15 counties it is necessary to consider them in combinations as shown in the notes to Table I of Chapter 2. The population of the territory formerly known as Rosebud Indian Reservation—but now comprising the counties of Mellette, Todd, Tripp, and parts of Bennett and Washabaugh—increased 7,082, or 136.2 per cent; while the combined counties of Butte, Harding, and Perkins increased 17,662, or 607.6 per cent. The territory now comprising Corson County, which was organized from Standing Rock Indian Reservation, increased 1,271, or 76.7 per cent in population. The combined population of Armstrong, Dewey, Schnasse, and Sterling Counties, which form Cheyenne River Indian Reservation, decreased 29, or 1.2 per cent, while the Pine Ridge Indian Reservation, comprising Shannon, Washington, and parts of Bennett and Washabaugh, decreased 220, or 3.2 per cent. Of the 52 counties for which the actual rates of increase or decrease can be determined, 49 counties increased in population during the last decade, the rates of increase ranging from 3.5 per cent in Hutchinson County to 1,016.7 per cent in Stanley County, and the absolute increases from 369 in Moody County to 13,634 in Stanley County. Three counties, Union, Clay, and Buffalo, decreased in population during the last decade, the rates of decrease being 4.3, 6.5, and 11.2, respectively. The absolute decreases were 201 in Buffalo County, 477 in Union County, and 605 in Clay County. The aggregate increase of population from 1900 to 1910 in the 49 counties and three combinations that show an increase is 183,850; the aggregate decrease of population in the three counties and two combinations that show a decrease is 1,532. The difference, 182,318, is, of course, the total increase of population in the state.

The maps on page 571 show the increase or decrease in the total and the rural population, respectively, of each county of South Dakota during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 76,868 square miles. The average number of persons to the square mile in 1910 was 7.6; in 1900 and 1890 it was 5.2 and 4.5, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 572, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 inhabitants or more, but not excluding the land area of such places.

Stanley County, with 4,156 square miles, has the largest area, and Sterling County, with 249 square miles, has the smallest area. Minnehaha County, containing Sioux Falls city, has the highest density of any county, namely, 36.4 persons per square mile, while Schnasse County has the lowest density, namely, 0.3. The Pine Ridge Indian Reservation, which is returned separately, has an area of 4,374 square miles and a density of 1.5 persons per square mile.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In South Dakota the counties are divided into 1,438 primary divisions, comprising 854 townships, 156 school townships, 103 school districts, 108 precincts, 86 cities, 81 towns, and 50 villages. There are also 18 secondary divisions, comprising 3 cities, 11 incorporated towns, and 4 incorporated villages. Of these, 2 cities are coextensive with the township and precinct in which they are located. These secondary divisions usually form parts of the primary divisions in which they are wholly or partly located. Besides these minor civil divisions, there are 157 unorganized townships, 3 of which have no population reported, 2 military reservations, 1 fort, 5 Indian reservations, including 2 which comprise the unorganized counties of the state, and some unorganized territory. The population of these divisions is returned under the counties in which they are wholly or partly located, except that of Pine Ridge Indian Reservation, which is returned separately by districts.

Urban and rural population compared.—The following table presents the population of South Dakota at the Federal censuses of 1910, 1900, and 1890, respectively, distributed among cities, towns, and villages grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

As shown by this table, the urban territory of the state in 1910—that is, the cities of 2,500 inhabitants or more—contained 76,673 inhabitants, or 13.1 per cent of the total population, while 507,215 inhabitants, or 86.9 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities then having 2,500 inhabitants or more—contained 40,936 inhabitants, or 10.2 per cent of the total popu-

¹ Includes population (19,792) of Indian reservations specially enumerated.

lation, while 360,634 inhabitants, or 89.8 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

In 1910 the two cities then having more than 10,000 inhabitants each, Sioux Falls and Aberdeen, contained 4.3 per cent of the total population of the state. In 1900 and 1890 Sioux Falls, the only city having over 10,000 inhabitants, comprised 2.6 and 2.9 per cent, respectively, of the total population of the state. The combined population of the groups of cities having between 2,500 and 10,000 inhabitants each comprised 8.9, 7.6, and 5.3 per cent of the total population of the state at the Federal censuses of 1910, 1900, and 1890, respectively.

The urban population of the state is contained in 13 cities, while the rural population is in 222 cities and incorporated towns and villages of less than 2,500 inhabitants each and in the unincorporated territory. The 222 places of less than 2,500 inhabitants each have an aggregate population of 117,679, or 20.2 per cent of the total population of the state. These places comprise 32 having from 1,000 to 2,500 inhabitants each, with a combined population of 42,568; 53 having from 500 to 1,000 inhabitants each, with a combined population of 36,711; and 137 having less than 500 inhabitants each, with a combined population of 38,400. The inhabitants of unincorporated territory number 389,536, or 66.7 per cent of the total population of the state.

The above table shows further that in all incorporated places, including those of less than 2,500 inhabitants, there was in 1910 a population of 194,352, or 33.3 per cent of the population of the state. The population of all incorporated places, as they existed in 1900, was 106,677, or 26.6 per cent of the population of the state.

Table I of Chapter 2 shows that 7 counties had a larger proportion and 1 county a smaller proportion of urban population in 1910 than in 1900. Four counties which were wholly rural in 1900 were partly urban in 1910, while 40 counties and the five combinations were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as pre-

viously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the following table, the total population in 1910 of those cities which at that time had 2,500 inhabitants or more was 76,673; in 1900 the total population of these same cities (so far as separately reported) was 47,945. It may be noted that the latter figure exceeds the total population in 1900 of those cities which at that time had over 2,500 inhabitants each, 40,936 (see table above), by 7,009. The difference is the result of the passage, since 1900, of certain communities from the rural to the urban class.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the combined population of the cities having, in 1910, 2,500 inhabitants or more, and the population of the remainder of the state.

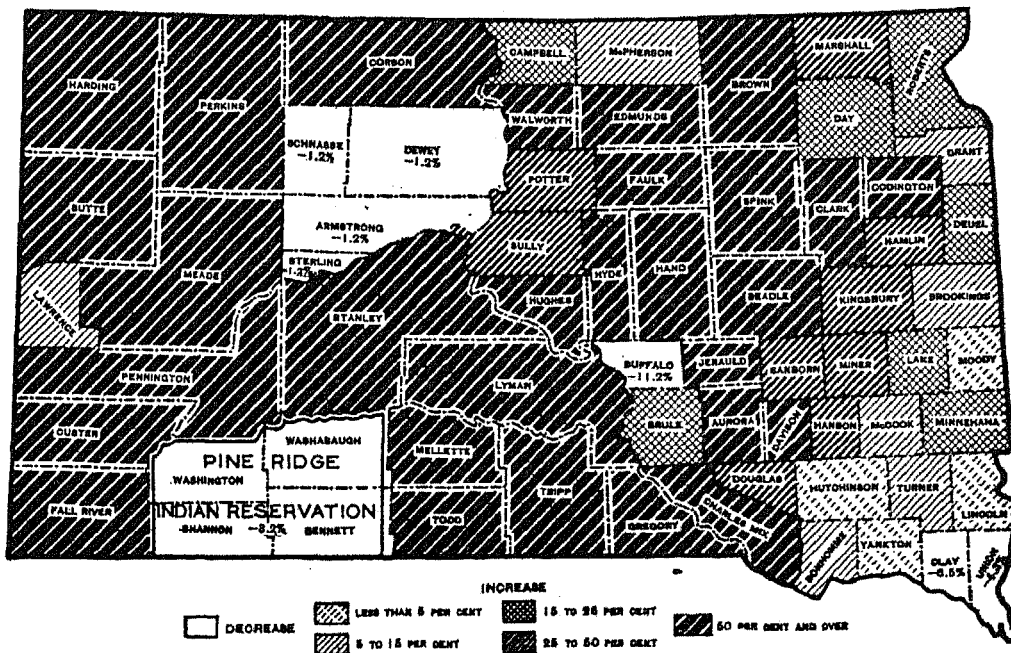

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	583,888	401,670	182,318	45.4
Cities of 2,500 inhabitants or more in 1910.	76,673	47,945	28,728	59.9
Remainder of the state.....	507,215	353,625	153,590	43.4

A comparison of the total population in 1910 of cities having a population of not less than 2,500 each with the total population of the same cities in 1900, as given in the preceding table, shows an increase of 59.9 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased 43.4 per cent. Urban population thus increased considerably faster than rural. For the United States as a whole urban population increased 34.9 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2 there are four counties and two combinations in South Dakota in which the population living in rural territory decreased and only one county in which there was a decrease of urban population.

¹ No comparison of population can be made; not returned by school townships in 1890.

² Leola town incorporated from part of Leola township (school) in 1907.

³ Organized from Lincoln township (school) in 1908.

⁴ Organized from Wachter township (school) in 1910.

⁵ County total includes population (615) of Newport and Weston townships not returned separately in 1890.

⁶ Incorporated as a city in 1906.

⁷ McKinley township organized from part of Dumarec township in 1903.

⁸ Veblen village incorporated from part of Veblen township in 1902.

⁹ No comparison of population can be made; not returned by school districts in 1900 and 1890.

¹⁰ Not returned separately in 1900.

¹¹ Unorganized; formed in 1900; within the limits of Rosebud Indian Reservation. Total population for Rosebud Indian Reservation, comprising Mellette, Todd, and parts of Bennett and Washaugh Counties, in 1910, 3,960, and in 1900, 5,201.

¹² Incorporated as a city in 1910.

¹³ Incorporated from parts of Dell Rapids and Sverdrup townships in 1907.

¹⁴ Incorporated from part of Taopi township in 1905.

¹⁵ Part taken to form part of Baltic town in 1907.

¹⁶ Sherman village incorporated from part of Palsade township in 1909.

¹⁷ Parts of Sioux Falls township annexed in 1902, 1905, and 1909; parts annexed to Sioux Falls township in 1902 and 1906.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890—Continued.

[The word "precinct," where used, means election precinct. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

CHAPTER 2.

COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of South Dakota by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of three general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for Aberdeen and Sioux Falls, the two cities of more than 10,000 inhabitants; and Table III for cities of 2,500 to 10,000 inhabitants.

A series of summary tables (numbered 1 to 12) reproduces from the general tables the more important state totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of South Dakota, 245,652, or 42.1 per cent, are native whites of native parentage; 217,491, or 37.2 per cent, are native whites of foreign or mixed parentage; and 100,628, or 17.2 per cent, are foreign-born whites. The corresponding percentages in 1900 were 33.9, 38.9, and 22, respectively, the comparison indicating a marked increase in the proportion of native whites of native parentage. The 19,137 Indians constitute 3.3 per cent of the population and the 817 negroes 0.1 per cent. In 51 of the 67 counties, the proportion of foreign-born whites is between 10 and 25 per cent; 5 counties report no foreign-born whites, and in 4 the proportion exceeds one-fourth. In 53 counties the population is more than one-fourth native white of foreign or mixed parentage, the proportion exceeding one-half in 4 counties. (See maps on page 595.)

Of the urban population, 51.5 per cent are native whites of native parentage; of the rural, 40.6 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 31.3 and 38.1 per cent, respectively. The percentage of foreign-born whites is 16.3 in the urban population and 17.4 in the rural; of negroes 0.5 in the urban and 0.1 in the rural. The Indians are almost exclusively found in the rural population, of which they constitute 3.8 per cent.

Sex (Table 2).—In the total population of the state there are 317,112 males and 266,776 females, or 118.9 males to 100 females. In 1900 the ratio was 116.6 to 100. Among native whites the ratio is 114.5 to 100, and among foreign-born whites 145.8. In the urban population there are 113.5 males to 100 females, and in the rural 119.7.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—46.6 per cent were born in South Dakota and 53.4 per cent outside the state; of the native white population, 54.8 per cent were born outside the state; of the native negro 82.8 per cent; and of the native Indian 19 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Table 5).—Of the foreign-born white population of South Dakota, persons born in Germany represent 21.4 per cent; Norway, 20.8; Russia, 13.1; Sweden, 9.9; Denmark, 6.3; Canada, 6;

Austria, 5.3; England, 4; Ireland, 3; Holland, 2.6; all other countries, 7.5 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Germany contributed 26 per cent; Norway, 19.1; Russia, 10.4; Sweden, 7.3; Canada, 6.3; Ireland, 5.5; Denmark, 4.7; England, 4.7; Austria, 4.2; Holland, 2.1; Scotland, 1.3; Finland, 1 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 178,189, representing 30.5 per cent of the population. Of such males, 36.9 per cent are native whites of native parentage, 29.4 per cent native whites of foreign or mixed parentage, 30.6 per cent foreign-born whites, 2.8 per cent Indians, and 0.2 per cent negroes. Of the 54,528 foreign-born white males of voting age, 32,495, or 59.6 per cent, are naturalized. Males of militia age—18 to 44—number 140,635.

Age (Tables 7 and 8).—Of the total population, 12.6 per cent are under 5 years of age, 21.8 per cent from 5 to 14 years, inclusive, 20.8 per cent from 15 to 24, 28.1 per cent from 25 to 44, and 16.5 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 4.3 per cent of this class being under 15 years of age, while 83.6 per cent are 25 years of age and over. Of the native whites of foreign or mixed parentage, 34.1 per cent are 25 and over; of the native whites of native parentage, 37.6 per cent; and of the Indians, 47.6 per cent.

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to urban communities explains this at least in part. Of the urban population, 33.4 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 27.3 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 183,979, of whom 122,642, or 66.7 per cent, attended school. In addition to these, 1,790 children under 6 and 2,471 persons 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 66.1; for girls, 67.2. For children from 6 to 14 years, inclusive, the percentage attending school was 83.3. The percentage for children of this age among native whites of foreign or mixed parentage was 84.6; among native whites of native parentage, 84.1; among foreign-born whites, 72.9; among negroes, 86.4; and among Indians, 61.2. (See Table I.) The percentage of school attendance for children from 6 to 14 was 87.2 in the urban population and 82.8 in the rural; for persons from 15 to 20, the percentages were 44 and 39.8, respectively.

Illiteracy (Table 10).—There are 12,750 illiterates in the state, representing 2.9 per cent of the total population 10 years of age and over, as compared with 5 per cent in 1900. The percentage of illiteracy is 45.5 among Indians, 5.5 among negroes, 5 among foreign-born whites, and 0.4 among native whites.

For all classes combined, the percentage of illiterates is 1.6 in urban communities and 3.1 in rural. More

than one-half of the rural illiterates, however, are Indians. For each of the native white classes the percentage of illiterates is the same in the rural as in the urban population, and for the foreign-born whites is lower in the rural.

For persons from 10 to 20 years, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is very low, being only 0.8. (See Table I.)

Marital condition (Table 11).—In the population 15 years of age and over, 44.6 per cent of the males are single and 29.3 per cent of the females. The percentage married is 50.4 for males and 63 for females, and the percentage widowed 3.6 and 6.6, respectively. The percentages of those reported as divorced, 0.6 both for males and for females, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due partly to the excess of males in the total population and partly to the fact that women marry younger. Thus 8 per cent of the females from 15 to 19 years of age are married, as compared with 0.4 per cent of the males, and 49.3 per cent of the females from 20 to 24 years are married, as compared with 15.6 per cent of the males; in the age group, 25 to 34 years, the percentages are 81.5 and 55.5, respectively. In the next age group, 35 to 44, the difference is less marked, while in the age group 45 and over the percentage married is higher among the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 62.3 for males and 75.4 for females; native whites of native parentage, 48.7 and 61.9, respectively; native whites of foreign or mixed parentage, 41.3 and 55.8; negroes, 47.2 and 58; Indians, 63.3 and 65.9.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married for females is higher in rural than in urban communities; for males, slightly lower.

Dwellings and families.—The total number of dwellings in South Dakota is 127,739, and the total number of families 131,060, indicating that in comparatively few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 4.6, and the average number per family, 4.5.

¹ State total includes population (5) of Jayne County, annexed to other counties since 1870; population (337) of old Todd County, annexed to Gregory County between 1880 and 1900; and population (899) of unorganized territory.

² Population of that part of county within the limits of Pine Ridge Indian Reservation not returned separately.

³ Includes 720 whites on Indian reservations specially enumerated, not distributed by counties; also population (1,339 whites) of Choteau, Delano, Ewing, Jack-

son, Martin, Nowlin, Pratt, Presto, Seobey, Ziebach, and old Harding and Todd Counties, annexed to other counties between 1890 and 1900.

⁴ Native whites having both parents born in countries other than specified, and also those having both parents of foreign birth but born in different countries.

⁵ Totals include 2,465 persons on Indian reservations, distributed by color and nativity as follows: Native white—native parentage, 139; native white—foreign or mixed parentage, 46; foreign-born white, 51; negro, 3; and Indian, 2,226.

NOTES REGARDING CHANGES IN BOUNDARIES, ETC., OF COUNTIES.

ARMSTRONG.—Unorganized; formed in 1883; within the limits of Cheyenne River Indian Reservation. Name changed from Pyatt in 1895. (See also Note 1.)

AURORA.—Organized from parts of Cragin and Wetmore in 1879; part taken to form Jerauld in 1883.

BEADLE.—Organized from parts of Burchard, Clark, Kingsbury, and Spink in 1873; part taken to form part of Brown in 1879.

BENNETT.—Unorganized; formed in 1909 from parts of Lugenbeel, Shannon, Washabaugh, and Washington; within the limits of Pine Ridge and Rosebud Indian Reservations. (See also Note 2.)

BROOKINGS.—Parts taken to form part of Hanson in 1871 and parts of Lake and Moody in 1873.

BROWN.—Organized from parts of Beadle and Mills in 1879.

BRULE.—Organized from part of Buffalo in 1875.

BUFFALO.—Parts taken to form Campbell, Edmunds, Faulk, Hand, Hughes, Hyde, McPherson, Potter, and Walworth, S. Dak., and Bottineau, Burleigh, Kidder, Logan, McHenry, Mountrail, Rolette, Sheridan, Stevens, Wadette, Wells, and parts of Lamoure and Stutsman, N. Dak., in 1873; parts taken to form Brule, S. Dak., and De Smet, N. Dak., in 1875.

BUTTE.—Organized from part of Harding and unorganized territory in 1883 and Choteau, Ewing, Harding, Martin, Rinehart, and Wagner annexed in 1899; parts taken to form Harding (new) and Perkins in 1909. (See also Note 3.)

CAMPBELL.—Organized from part of Buffalo in 1873.

CHARLES MIX.—Part taken to form Douglas in 1873.

CLARK.—Organized from part of Hanson in 1873; parts taken to form part of Beadle in 1873 and part of Codington in 1877.

CODINGTON.—Organized from parts of Clark, Grant, and Hamlin in 1877; part of Sisseton and Wahpeton Indian Reservation annexed between 1880 and 1890.

CORSON.—Organized in 1909 from Boreman and parts of Dewey and Schnasse (comprising that part of Standing Rock Indian Reservation in South Dakota).

CUSTER.—Formed from unorganized territory in 1875; part taken to form Fall River in 1883.

DAVISON.—Organized from part of Hanson in 1873.

DAY.—Organized from Greeley and part of Stone in 1879; part taken to form part of Marshall in 1889; part of Sisseton and Wahpeton Indian Reservation annexed between 1880 and 1890.

DEUEL.—Part taken to form part of Hanson in 1871; parts taken to form Grant and parts of Hamlin, S. Dak., and Henville, N. Dak., in 1873.

DEWEY.—Unorganized; formed in 1873; within the limits of Cheyenne River Indian Reservation. Part taken to form part of Corson in 1909; name changed from Rusk in 1883. (See also Note 1.)

DOUGLAS.—Organized from part of Charles Mix in 1873.

EDMUNDS.—Organized from part of Buffalo in 1873.

FALL RIVER.—Organized from part of Custer in 1883.

FAULK.—Organized from part of Buffalo in 1873.

GRANT.—Organized from part of Deuel in 1873; parts taken to form part of Codington in 1877 and part of Roberts in 1883; part of Sisseton and Wahpeton Indian Reservation annexed between 1880 and 1890.

GREGORY.—Todd (old) annexed in 1899.

HAMLIN.—Organized from parts of Deuel and Hanson in 1873; part taken to form part of Codington in 1877.

HAND.—Organized from part of Buffalo in 1873 and part of Burchard annexed in 1879.

HANSON.—Organized from parts of Brookings, Deuel, and Minnehaha in 1871; parts taken to form Mercer, N. Dak., and Clark, Davison, Kingsbury, Miner, Spink, and Stone, and parts of Hamlin, Lake, and McCook, S. Dak., in 1873; part of Cragin annexed in 1879 and part of Jayne annexed between 1870 and 1880.

HARDING.—Organized from part of Butte in 1909. (See also Note 3.)

HUGHES.—Organized from part of Buffalo in 1873.

HUTCHINSON.—Armstrong (old) annexed in 1879 and part of Jayne annexed between 1870 and 1880.

HYDE.—Organized from part of Buffalo in 1873.

JERAULD.—Organized from part of Aurora in 1883.

KINGSBURY.—Organized from part of Hanson in 1873; part taken to form part of Beadle in 1873.

LAKE.—Organized from parts of Brookings, Hanson, and Minnehaha in 1873.

LAWRENCE.—Formed from unorganized territory in 1875; part taken to form Meade in 1889.

LINCOLN.—Part taken to form part of Turner in 1871.

LYMAN.—Formed from unorganized territory in 1873 and Pratt and Presho annexed in 1899.

MCCOOK.—Organized from parts of Hanson and Jayne in 1873 and part of Jayne annexed between 1870 and 1880.

MCPHERSON.—Organized from part of Buffalo in 1873.

MARSHALL.—Organized from parts of Day County and Sisseton and Wahpeton Indian Reservation in 1885.

MEADE.—Organized from part of Lawrence in 1889 and DeLano and Seobey annexed in 1899.

MELLETTTE.—Unorganized; formed in 1909 from parts of Meyer and Washabaugh; within the limits of Rosebud Indian Reservation. (See also Note 2.)

MINER.—Organized from part of Hanson in 1873; parts annexed to Bramble and Wetmore in 1879; part taken to form Sanborn in 1883.

MINNEHAHA.—Parts taken to form part of Hanson in 1871 and parts of Lake and Moody in 1873.

MOODY.—Organized from parts of Brookings and Minnehaha in 1873.

PENNINGTON.—Formed from unorganized territory in 1875; part taken to form Ziebach in 1879; Ziebach annexed in 1899.

PERKINS.—Organized from part of Butte in 1909. (See also Note 3.)

POTTER.—Organized as Ashmore from part of Buffalo in 1873; name changed in 1875.

ROBERTS.—Organized from parts of Grant County and Sisseton and Wahpeton Indian Reservation in 1883.

SANBORN.—Organized from part of Miner in 1883.

SCHNASSE.—Unorganized; formed in 1883; within the limits of Cheyenne River Indian Reservation; part taken to form part of Corson in 1909. (See also Note 1.)

SHANNON.—Unorganized; formed in 1883; within the limits of Pine Ridge Indian Reservation; parts taken to form Washington in 1883 and part of Bennett in 1909.

SPINK.—Organized from part of Hanson in 1873; part taken to form part of Beadle in 1873.

STANLEY.—Formed from unorganized territory in 1873; Jackson, Nowlin, and part of Sterling annexed in 1899.

STERLING.—Unorganized; formed in 1883; within the limits of Cheyenne River Indian Reservation; part annexed to Stanley in 1899. (See also Note 1.)

SULLY.—Formed from unorganized territory in 1873.

TODD.—Unorganized; formed in 1909 from parts of Lugenbeel, Meyer, Tripp, and Washabaugh; within the limits of Rosebud Indian Reservation. (See also Note 2.)

TRIPP.—Organized from part of Rosebud Indian Reservation in 1909. (See also Note 2.)

TURNER.—Organized from parts of Jayne and Lincoln in 1871 and part of Jayne annexed between 1870 and 1880.

UNION.—Part ceded to Dakota County, Nebr., in 1908.

WALWORTH.—Organized from part of Buffalo in 1873.

WASHABAUGH.—Unorganized; formed in 1883; within the limits of Pine Ridge and Rosebud Indian Reservations; parts taken to form parts of Bennett, Mellette, and Todd in 1909. (See also Note 2.)

WASHINGTON.—Unorganized; formed from part of Shannon in 1883; within the limits of Pine Ridge Indian Reservation; part taken to form part of Bennett in 1909.

PINE RIDGE INDIAN RESERVATION.—Comprising Shannon, Washington, and parts of Bennett and Washabaugh Counties, but division by counties can not be made.

NOTE 1.—*Cheyenne River Indian Reservation, comprising Armstrong, Dewey, Schnasse, and Sterling Counties.*—Total population: 1910, 2,336; 1900, 2,365; decrease, 1900-1910, 29; per cent of decrease, 1.2. Rural population, 1910, 2,336; same territory in 1900, 2,365; per cent of decrease, 1.2. Rural population, 1900, 2,365.

NOTE 2.—*Rosebud Indian Reservation (comprising Mellette, Todd, and parts of Bennett and Washabaugh Counties) and Tripp County.*—Total population: 1910, 12,283; 1900, 5,201; increase, 1900-1910, 7,082; per cent of increase, 136.2. Rural population, 1910, 12,283; same territory in 1900, 5,201; per cent of increase, 136.2. Rural population, 1900, 5,201.

NOTE 3.—*Butte, Harding, and Perkins Counties combined.*—Total population: 1910, 20,569; 1900, 2,907; increase, 1900-1910, 17,662; per cent of increase, 607.6. Rural population, 1910, 20,569; same territory in 1900, 2,907; per cent of increase, 607.6. Rural population, 1900, 2,907.

NOTE 4.—In computing this increase the population of Indian reservations in 1900 has been deducted from the total population of the county in order to make that total comparable with the total for 1890, which does not include the population of Indian reservations. The population thus deducted in two counties was as follows: Buffalo, 1,123; Lyman, 517.

NOTE 5.—Population of that part of Standing Rock Indian Reservation now constituting Corson County—1900, 1,658; increase, 1900-1910, 1,271; per cent of increase, 76.7. Rural population, 1910, 2,929; same territory in 1900, 1,658; per cent of increase, 76.7. Rural population, 1900, 1,658.

CHAPTER 3.

STATISTICS OF AGRICULTURE FOR THE STATE AND ITS COUNTIES.

Introduction.—This chapter presents a complete statement of the statistics of agriculture for South Dakota collected at the census of 1910. Statistics of farms and farm property relate to April 15, 1910; those of farm products, expenses, and receipts are for the calendar year 1909.

Definitions.—To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term referring to the work of growing crops, producing other agricultural products, and raising animals, fowls, and bees. A "farm" as thus defined may consist of a single tract of land, or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. Further, when a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1909.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operations of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, tenants, and managers.

Farm owners include (1) farmers operating their own land only, and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "owners" being then restricted to those owning all their land.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1910 in three classes: (1) *Share tenants*—those who pay a certain share of the products, as one-half, one-third, or one-quarter; (2) *share-cash tenants*—those who pay a share of the products for part of the land rented by them and cash for part; and (3) *cash tenants*—those who pay a cash rental or a stated amount of labor or products, such as \$7, 10 bushels of wheat, or 100 pounds of seed cotton per acre.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. The same classification was followed in 1880. At former censuses, except that of 1880, farm land was divided into improved land and unimproved

land, woodland being included with unimproved land. *Improved land* includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics therefore must be considered at best only a close approximation.

Total value of farm products.—No attempt has been made at this census to compute or even to estimate approximately the total value of farm products. Among the numerous difficulties which stand in the way of obtaining a total which would be at once comprehensive, free from duplication, and confined exclusively to the products of a definite period of time are the following:

(1) The duplication resulting from the feeding of farm crops to farm live stock, when the value both of the products derived from such live stock and of the crops are included in the same total. In 1900 an attempt was made to eliminate this duplication by means of an inquiry as to the total value of the products of each farm fed to the live stock on that farm, but, aside from the fact that this would not eliminate the duplication where the products of one farm are fed to the live stock of another farm, it is believed that the farmers were unable to make even approximately accurate answers to the inquiry, and it was accordingly not included in the schedule for 1910.

(2) The fact that farmers may buy domestic animals during the census year which are subsequently sold or slaughtered during the same year and that it is impossible to eliminate the duplication accurately; and the further fact that the value of domestic animals sold or slaughtered, or of forest products cut, during a given year (as well as some other minor items) does not usually represent a value created wholly during that year, and that it is quite impossible to ascertain the value created during the year.

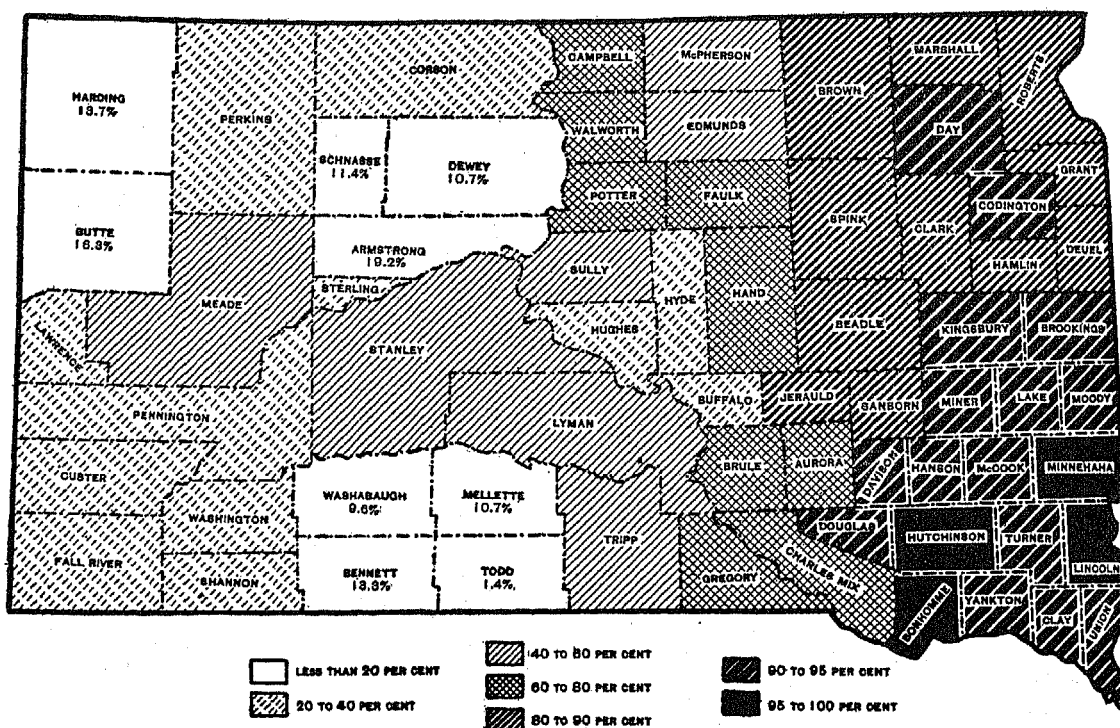

(3) The fact that the returns for some products are incomplete. The returns for all products are to a considerable extent estimates made by the farmers. Special difficulty was encountered in cases where the person in possession of the farm in April, 1910, when the census was taken, was not in possession of it during the crop year 1909. In such cases the farmer was not always able to report completely and accurately the products of the land for the preceding year. It is probable that the returns for the principal crops are in general fairly accurate, but that those for minor crops and for dairy and poultry products are frequently understatements, particularly because the home consumption was disregarded or underestimated. In the belief that no accurate result could be obtained from such an inquiry, the Bureau of the Census did not even attempt to ascertain the total quantity and value of certain by-products, such as straw and cornstalks, which are of considerable importance, the schedule calling only for the value of such by-products sold.

PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN SOUTH DAKOTA, BY COUNTIES: 1910.

PER CENT OF LAND AREA IN FARMS.

[Per cent for the state, 52.9.]

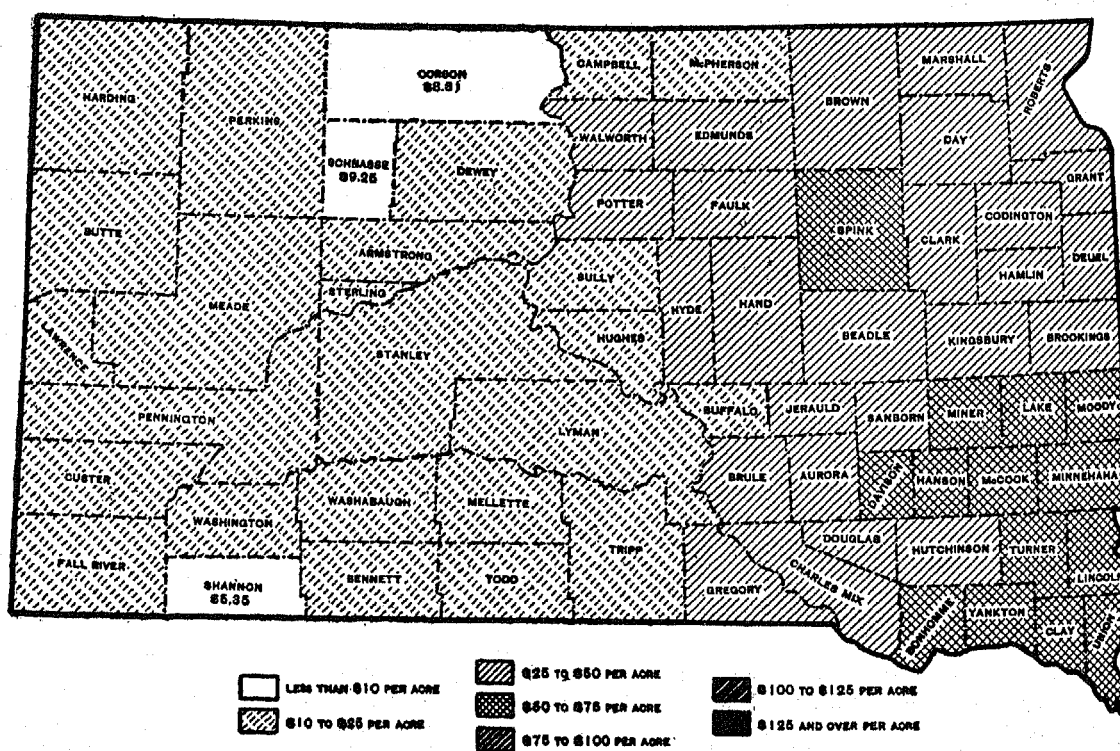

The per cent of land area in farms, when less than 20, is inserted under the county name.

AVERAGE VALUE OF FARM LAND PER ACRE.

[Average for the state, \$34.69.]

When the value is less than \$10 per acre, it is inserted under the county name.

FARMS AND FARM PROPERTY.

South Dakota ranks fourteenth in land area and thirty-sixth in population among the states and territories of continental United States. The state of South Dakota lies in the northwestern portion of the great Mississippi Basin. The lowest altitudes within the limits of the state are found in the extreme southwestern counties within the alluvial bottoms of the Missouri River. The eastern portion of the state consists of a high, rolling plateau which has been heavily glaciated, and whose elevations range from 1,200 to 1,800 feet above sea level. West of the Missouri River the surface of the state consists of the rolling and somewhat dissected area of the residual prairies, which attain to increasing altitudes toward the margin of the Black Hills. The latter constitute the highest elevations within the state, attaining to altitudes in excess of 7,000 feet. The Missouri River and its principal tributaries are bordered by narrow alluvial bottoms. Four-fifths of the entire area of the state lies between altitudes of 1,000 and 3,000 feet above sea level. The soils of the glaciated plateau region, comprising the eastern two-fifths of the state, are derived from a layer of glacial till, which varies in thickness from a few feet to more than 200 feet. These soils are largely brown

or yellow silt loams and loams well suited to the production of the grains and grasses. The surface is undulating to rolling and usually well drained.

In the extreme southeastern portion of the state a small portion of the glaciated upland has been covered by the soft silty deposit known as the loess, giving rise to brown silty loams, suited to general farming and to the raising of apples.

West of the Missouri River the soils consist of sandy loams, loams, clay loams, and heavy clays, derived through the weathering of the underlying shales and sandstones. The Black Hills region consists of a mountainous uplift within which only a few narrow valleys are suited to any agricultural purposes.

Throughout the state the precipitation is sufficient for growing grain crops without irrigation, the normal annual rainfall in the section west of the Missouri River being 15 to 20 inches. Irrigation is practiced to a considerable extent in the vicinity of the Black Hills.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE. ¹	
			Amount.	Per cent.
Population.....	583,888	401,570	182,318	45.4

Average value of all property per farm.....	\$15,018	\$5,654	\$9,364	165.6
Average value of land per acre.....	\$34.69	\$9.92	\$24.77	249.7

¹ A minus sign (—) denotes decrease.

NOTE.—Ranges or ranches using the public domain for grazing purposes, but not owning or leasing land, were counted as farms in 1910 and 1900. They were included as owned or managed, free from mortgage, and under 3 acres in size. The counting of these ranges as farms affects all totals, averages, and percentages in which the number of farms is a factor. In 1910 there were 63 such ranges included as farms.

The two maps on the opposite page show, by counties, the proportion of the total land area which is in farms, and the average value of farm land per acre. In both of these respects the part of the state west of the Missouri River, which divides the state into two

nearly equal sections, differs decidedly from the part east of that river. West of this river 9 counties have less than 20 per cent of their land in farms, 9 from 20 to 40 per cent, 4 from 40 to 60 per cent, and but 1, Gregory, bordering on the river, more

than 60 per cent. East of the river the proportion of land in farms averages much higher, rising in 4 counties to 95 per cent and over, and in 15 others to between 90 and 95 per cent.

The average value per acre of farm land in every county west of the river, except Gregory, is less than \$25, while east of the river the average value is below this amount in but 5 counties, and in 14 counties is between \$50 and \$75. Because of the essentially different types of land and the somewhat dissimilar types of agricultural operations carried on in these two parts of the state, the percentages and averages given in the several summary tables throughout this bulletin can not be relied upon as revealing a general condition or movement throughout the state. Statistics for separate portions of the state are shown by the county tables at the close of this chapter.

Unlike the older states, South Dakota shows for the past decade a greater relative increase in number of farms than in population, the number of farms increasing 47.6 per cent, and the population 45.4 per cent. The acreage in farms increased 36.4 per cent, and the acreage of improved land 40.2 per cent. The average size of farms decreased from 362.4 to 335.1 acres.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), had increased in value \$868,572,000, or 291.9 per cent. This increase was chiefly made up of increases of \$713,400,000 in the value of land and of \$71,548,000 in the value of buildings. There has also been an increase of \$83,624,000 in the value of farm equipment, which includes implements and machinery and live stock, of which about three-fourths represents the gain in the value of live stock, although a greater relative gain occurred in the value of implements and machinery. In considering the increase of values in agriculture the general increase in the prices of all commodities in the last 10 years should be borne in mind.

The average value of a farm with its equipment in 1900 was \$5,654, while 10 years later it was \$15,018. The average value of land per acre more than trebled, rising from \$9.92 in 1900 to \$34.69 in 1910, this advance being accompanied by increases in the average value per farm of implements and machinery and of live stock.

Irrigation.—Of the 77,644 farms in the state, 500, or 0.6 per cent, were reported as irrigated in 1909. The acreage reported as irrigated in 1909 was 63,248 acres, or 0.4 per cent of the improved land in farms. The area to which enterprises existing in 1910 were capable of supplying water was 128,481 acres, and the total acreage included in irrigation projects, completed or under way, in 1910 was 201,625 acres.

Population, number of farms, and farm acreage: 1890 to 1910.—In the 20 years since 1890 the population of the state has increased 235,288, or 67.5 per cent. Over three-fourths of this increase occurred during the last decade.

The number of farms increased very rapidly during the last decade, advancing from 52,622 in 1900 to 77,644 in 1910, an average of 2,502 a year, which is more than ten times as large as the average increase per year during the preceding decade.

The land surface of South Dakota is approximately 49,195,520 acres. Of this area, 26,016,892 acres, or 52.9 per cent, are included in farms, and of this farm acreage, 15,827,208 acres, or 60.8 per cent, are reported as improved land, representing 32.2 per cent of the total land area of the state. In both the last decade and that preceding the acreage of improved land increased at a rate about the same as that of the increase in the total farm acreage, so that the proportion improved has varied but little since 1890.

The table following presents, for the state as a whole for each census from 1890 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

CENSUS YEAR.	Popu- lation.	FARMS.		LAND IN FARMS.			Per cent of land area in farms.	Per cent of farm land im- prov- ed.
		Num- ber.	Per cent of in- crease.	All land.		Improved land (acres).		
				Acres.	Per cent of in- crease.			
1910. . . .	533,888	77,644	47.6	26,016,892	36.4	15,827,208	52.9	60.8
1900. . . .	401,570	52,622	4.9	19,070,616	67.3	11,285,983	38.8	56.2
1890 ¹ . . .	348,600	50,158	11,396,460	6,959,293	23.2	61.1

¹ Dakota territory prior to 1890. In 1880 the territory had 135,177 population; 17,435 farms; and 3,800,656 acres in farm land, of which 1,150,413 acres were reported as improved.

Values of farm property: 1890 to 1910.—The agricultural changes in South Dakota since 1890, as reflected in the values of the several classes of farm property, are shown in the table which follows:

CENSUS YEAR.	FARM PROPERTY.					
	Total.		Land and buildings.		Implements and machinery.	Domestic animals, poultry, and bees.
	Value.	Per cent of increase.	Value.	Per cent of increase.	Value.	Per cent of increase.
1910.....	\$1,166,097,980	291.9	\$1,005,080,807	356.6	\$33,786,973	176.5
1900.....	297,525,302	104.4	220,133,190	104.8	12,218,680	46.0
1890 ¹	145,527,556	107,466,336	8,371,712

¹ Dakota territory prior to 1890. In 1880 the total value of farm property for the territory was reported as \$32,346,449, of which \$22,401,084 represented land and buildings; \$2,890,091 implements and machinery; and \$7,555,274 domestic animals, poultry, and bees (including estimated value of range animals).

² Includes estimated value of range animals.

The total wealth in the form of farm property is \$1,166,097,000, of which 86.2 per cent is represented by land and buildings, 2.9 per cent by implements and machinery, and 10.9 per cent by live stock. The total value of farm property was nearly four times as great as in 1900, having increased \$868,572,000.

The absolute and relative increase in the total value, and, with the exception of the relative increase in the value of live stock, in the value of each class of property was much greater in the last decade than in the decade preceding.

Average acreage and values per farm: 1890 to 1910.—The changes which have taken place during the past 20 years in the average acreage of South Dakota farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. ¹				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	335.1	\$15,018	\$12,945	\$435	\$1,639	\$38.63
1900.....	362.4	5,664	4,183	232	1,238	11.54
1890 ²	227.2	2,901	2,143	167	592	9.43

¹ Averages are based on "all farms" in state.

² Dakota territory prior to 1890. In 1890 the averages for the territory were as follows: Average acres per farm, 218; average value per farm of all farm property, \$1,855; of land and buildings, \$1,235; of implements and machinery, \$137; and of domestic animals, poultry, and bees, \$433; and average value of land and buildings per acre, \$5.89.

³ Includes estimated value of range animals.

The average size of a South Dakota farm increased from 227.2 acres in 1890 to 362.4 acres in 1900, but during the last decade decreased to 335.1 acres. The increase occurring between 1890 and 1900 was due chiefly to the greatly increased number of reports secured from very large farms, the number of farms of over 1,000 acres reported increasing from 187 in 1890 to 2,041 in 1900. These farms consisted mainly of live stock farms lying outside the leading grain growing districts.

The average value of a South Dakota farm, including its equipment, is \$15,018, of which \$12,945 represents the value of land and buildings, \$1,639 the value of live stock, and \$435 the value of implements and machinery. The average value of land and buildings was \$38.63 per acre, or more than three and a third times as much as in 1900. This is a much greater actual and relative gain than occurred during the preceding decade. The value per farm of live stock has increased by about one-third, and that of implements and machinery has nearly doubled during the last decade.

Farm tenure: 1890 to 1910.—The next table shows the distribution of the farms of the state according to character of tenure at each census since 1890.

The proportion of farms operated by tenants for the state as a whole is about two-thirds the proportion for the entire country. This comparatively small proportion is partly due to the fact that west of the Missouri River a very small relative number of farms are operated by tenants, thus conforming to the usual conditions in newly settled districts. In that part of the state a large number of farms have been acquired within recent years from the Government in the form of homesteads, this, together with the

general low price of land, making ownership possible to the man of small means.

For purposes of comparison with previous years the four classes of tenants distinguished in the returns for 1910 are grouped in two classes, namely, (1) share, including share-cash, and (2) cash, including nonspecified. Throughout the 20-year period the number both of share and of cash tenants has been increasing at a somewhat more rapid rate than the number of farmers who own their farms. Share tenancy is, however, much more frequent than cash tenancy, although the latter form has become somewhat more common relatively during the last decade. Of the total number of farms, 19.1 per cent are now operated by share tenants and 5.7 per cent by cash tenants.

TENURE.	1910	1900	1890 ¹
Number of all farms.....	77,644	52,622	50,158
Farms operated by owners and managers.....	58,413	41,171	43,555
Farms consisting of owned land only.....	49,495	25,676	(?)
Farms consisting of owned and hired land....	17,579	14,964	(?)
Farms operated by managers.....	429	531	(?)
Farms operated by tenants.....	19,231	11,451	6,603
Share tenants.....	11,156	9,676	5,309
Share-cash tenants ²	3,668		
Cash tenants.....	2,301	1,775	1,294
Tenure not specified ³	2,106		
Per cent of farms operated by—			
Owners and managers.....	75.2	78.2	86.8
Tenants.....	24.8	21.8	13.2
Share and share-cash.....	19.1	18.4	10.6
Cash and nonspecified.....	5.7	3.4	2.6

¹ Dakota territory prior to 1890. Of the 17,435 farms in the territory in 1880, 16,757 were operated by owners and managers and 678 by tenants (606 share and share-cash and 72 cash and nonspecified).

² Not reported separately.

³ Share-cash tenants were doubtless largely included with share tenants in 1900 and 1890.

⁴ Prior to 1910 nonspecified tenants were included with cash tenants.

The following table shows the acreage, improved acreage, and value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	26,616,892	19,070,616	15,827,208	11,285,983	\$1,005,080,807	\$220,133,190
Owners.....	19,314,938	15,168,804	10,779,500	8,730,724	694,509,873	167,583,680
Managers.....	635,199	476,141	288,166	144,072	13,618,757	4,310,720
Tenants.....	6,666,755	3,425,671	4,759,542	2,411,187	296,652,177	48,238,790

The following table shows the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms:

FARMS OPERATED BY—	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Owners.....	74.7	77.2	74.2	79.5	68.1	77.4	69.1	76.1
Managers.....	0.6	1.0	2.4	2.5	1.8	1.3	1.4	2.0
Tenants.....	24.8	21.8	23.3	18.0	30.1	21.4	29.5	21.9

It will be seen that, in 1910, 74.2 per cent of all land in farms was in farms operated by their owners (including part owners), 2.4 per cent in farms operated by managers, and 23.3 per cent in farms operated by tenants, the percentage for owners and for managers being lower and that for tenants higher than in 1900.

As shown by the next table, the average size of farms operated by managers in 1910 (1,480.7 acres) was nearly four and one-half times as great as that of farms operated by owners (333.1 acres), which was in turn larger than that of farms operated by tenants (315.5 acres). The average size of farms operated by managers and by tenants increased between 1900 and 1910, while that of farms operated by owners decreased. In 1910 the percentage of farm land improved was highest for tenant farms and lowest for farms operated by managers.

FARMS OPERATED BY—	AVERAGE ACRES PER FARM.				PER CENT OF FARM LAND IM- PROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	All land.		Improved land.				Per farm.		Per acre.	
	1910	1900	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	335.1	362.4	203.8	214.5	60.8	59.2	\$12,945	\$4,183	\$38.63	\$11.54
Owners.....	333.1	373.2	185.9	214.8	55.8	57.6	11,078	4,124	35.96	11.05

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

CLASS.	OWNED FARMS. ¹		OWNED FARM HOMES.		OWNED FARM HOMES. ²	
	1910		1900		1890	
	Number	Per cent. ³	Number	Per cent. ³	Number	Per cent.
Total.....	57,984		40,115		41,521	
Free from mortgage.....	35,101	61.8	24,353	63.3	19,771	47.6
Mortgaged.....	21,691	38.2	14,148	36.7	21,750	52.4
Unknown.....	1,192		1,609			

¹ Includes all farms owned in whole or in part by the operator.

² The 1,049 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.

³ Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 57,984. Of this number, 35,101 were reported as free from mortgage; 21,691 were reported as mortgaged; and for 1,192 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 38.2 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The corresponding percentage in 1900 was 36.7; in 1890 it was very much larger, namely, 52.4. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the number reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that the number of mortgaged farms was approximately the same in 1910 and in 1890, but in 1900 was much less, while farms free from mortgage increased each decade.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 21,691 farms reported as mortgaged, 11,866 are wholly owned by the farmers, and for 11,313 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARMS OR FARM HOMES MORTGAGED.		INCREASE.	
	1910 ¹	1890 ²	Amount.	Per cent.
Number.....	11,313	21,750		
Value—Land and buildings.....	\$154,749,490	\$40,148,585		
Amount of mortgage debt.....	\$32,771,359	\$15,461,634		
Per cent of debt to value.....	21.2	38.6		
Average value per farm.....	\$13,679	\$1,846	\$11,833	641.0
Average debt per farm.....	\$2,897	\$712	\$2,185	306.9
Average equity per farm.....	\$10,782	\$1,134	\$9,648	850.8

¹ Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.

² Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms has increased in the last 20 years from \$712 to \$2,897, or 306.9 per cent, while the average value of such farms rose from \$1,846 to \$13,679, or 641 per cent. Thus the owner's

equity increased on the average from \$1,134 to \$10,782, or 850.8 per cent. As a result of the greater relative increase in farm values than in farm debt, the mortgage indebtedness, which represented 38.6 per cent of the value of the farm in 1890, had decreased to 21.2 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.—The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900	Number.	Percent.	1910	1900
Total.....	77,644	52,622	25,022	47.6	100.0	100.0
Under 3 acres.....	99	308	-209	-67.9	0.1	0.6
3 to 9 acres.....	341	231	110	47.6	0.4	0.4
10 to 19 acres.....	368	268	100	37.3	0.5	0.5
20 to 49 acres.....	1,121	967	154	15.9	1.4	1.8
50 to 99 acres.....	2,406	2,214	192	8.7	3.1	4.2
100 to 174 acres.....	28,396	16,144	12,252	75.9	36.6	30.7

260 to 499 acres.....	24,811	17,871	6,940	38.8	32.0	34.0
500 to 999 acres.....	9,698	7,074	2,624	37.1	12.5	13.4
1,000 acres and over.....	2,174	2,041	133	6.5	2.8	3.9

¹ A minus sign (—) denotes decrease.

The two groups, "100 to 174 acres" and "260 to 499 acres," contain more than two-thirds of all the South Dakota farms, thus emphasizing the frequency of the quarter and half section farms. Each of these two groups contains more than three times as many farms as does the intervening group. Only about 6 per cent of all the farms contain less than 100 acres each. The number of farms within each size group, except the smallest (those of under 3 acres), has increased during the last decade. The number of places under 3 acres reported as farms is only about one-third as large as 10 years ago, a difference which may, in large part, be due to a different interpretation by the enumerators as to what constitutes a small farm. Farms of 100 to 174 acres constituted a decidedly larger proportion of the total number of farms in 1910 than in 1900.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 808), and also the farms of between 175 and 499 acres (numbering 33,041):

SIZE GROUP (ACRES).	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900

1,000 acres and over.....	2.8	3.9	15.1	18.1	10.1	10.0	9.6	8.8

¹ Less than one-tenth of 1 per cent.

Of the total farm acreage of the state in 1910, 41.6 per cent was in farms of 175 to 499 acres, and 25.3 per cent in farms of 500 to 999 acres, these two being from the standpoint of aggregate acreage the most important size groups. The most notable change between 1900 and 1910 was the increase in the proportion of the total acreage which was in farms of 100 to 174 acres, offset by decreases in the proportion for farms of every other size group, except that of 20 to 49 acres, in which the proportion remained the same.

In general, as shown by the next table, the percentage of farm land improved diminishes as the average size of the farms increases, the proportion in farms of 175 to 499 and of 500 to 999 acres forming exceptions to this rule. Owing to the higher proportion of improved land in smaller farms, and to the fact that buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land generally diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group.

SIZE GROUP.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910.

Of the South Dakota farmers 63.6 per cent were native whites and 32.8 per cent were foreign-born whites. Only 2,808, or 3.6 per cent of all farmers, were nonwhite, 2,740 being Indians; 67, negroes; and

1, a Chinaman. Of the native-white farmers 28.4 per cent were tenants, as compared with 20.2 per cent among the foreign-born whites.

Of the 25,476 foreign-born white farmers in South Dakota in 1910, 6,523 were born in Germany; 5,381 in Norway; 3,240 in Russia; 2,708 in Sweden; 1,811 in Denmark; 1,204 in Austria; 1,152 in Canada; 780 in Holland; 676 in England; and 619 in Ireland. Other European countries were represented by 1,332 farmers, and non-European countries, other than Canada, by 50.

DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this chapter, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

The total value of live stock on farms, including domestic animals, poultry, and bees, in 1910 was \$127,229,000, of which domestic animals contributed \$124,841,000. The value of cattle represented 28.5 per cent of the total value of live stock; that of horses and mules, 59 per cent; that of swine, 8.2 per cent; that of sheep and lambs, 2.4 per cent; and that of poultry, 1.9 per cent, the other classes being insignificant.

The next table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

Of the total number of farms enumerated, 72,065, or 92.8 per cent, report domestic animals of some kind, the number without any domestic animals being only 5,579.

Of all the farms in the state, 83.8 per cent report cattle, 78.6 per cent reporting "dairy cows" and 40.2 per cent "other cows." The total number of cows, especially "dairy cows," increased materially during the decade, while the average values remained almost constant. The average number of "dairy cows" per farm reporting is about 6, while the average number of "other cows" per farm reporting is nearly 11.

Horses and colts are reported by 91.2 per cent of all the farms in the state, yearlings by 40.3 per cent, and in spite of the early date of enumeration, spring colts by 18.3 per cent. Mature horses are valued at nearly two and one-half times the average reported in 1900.

Only about 6 farms in every 100 report mules and mule colts, but the average values are considerably higher than those of horses of the corresponding age groups.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Percent of all farms.	Number.	Value.	Average value.

Hogs and pigs born before Jan. 1, 1910.....	47,152	60.7	658,181	9,598,656	14.88
Pigs born after Jan. 1, 1910.....	20,670	26.6	351,540	788,437	2.24
Sheep.....	5,159	6.6	611,264	3,002,038	4.91
Ewes born before Jan. 1, 1910.....	4,883	6.3	412,648	2,304,684	5.69
Rams and wethers born before Jan. 1, 1910.....	2,539	3.3	88,393	473,063	5.35
Lambs born after Jan. 1, 1910.....	3,120	4.0	110,223	224,291	2.03
Goats.....	660	0.9	2,337	11,422	4.89

Sheep and lambs are reported from 5,159 farms, or 6.6 per cent of all the farms in the state, whereas 12.1 per cent of all farms reported sheep in 1900. Of the farms reporting sheep and lambs in 1910, only 60.5 per

cent report spring lambs, the number of the latter being equal to 26.7 per cent of the number of ewes. This small proportion is doubtless due to the early date of enumeration. The average flock in the state, excluding spring lambs, consists of 97 sheep, while in 1900 it consisted of 79. The average number of ewes is over 84 per farm reporting that class, and the farms reporting rams and wethers show an average of about 35 per farm.

Of all farms, 61.9 per cent report swine, the average number being about 21 per farm reporting. On account of the early date of enumeration only 26.6 per cent report spring pigs. The average value of the swine reported as "hogs and pigs born before January 1, 1910," is \$14.58.

Poultry on farms: 1910 and 1900.—The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Per cent of all farms.			
Total.....	61,561	79.3	5,251,348	\$2,356,465	3,178,285
Chickens.....	61,492	79.2	4,924,349	2,147,380	3,028,700
Turkeys.....	10,832	14.0	51,992	78,130	53,749
Ducks.....	16,281	21.0	87,544	45,628	62,511
Geese.....	13,623	17.5	69,991	65,910	33,334

Pigeons.....	3,031	3.9	114,935	14,332	(2)
Pheasants.....	18	(3)	72	228	(2)

¹ Included with chickens. ² Not reported. ³ Less than one-tenth of 1 per cent.

The increase in the number of fowls on South Dakota farms during the last decade amounts to 65.2 per cent, while the value increased from \$857,000 to \$2,356,000, or 175 per cent. Chickens constituted over 90 per cent of the number and value of all poultry in 1910 and increased over 60 per cent in number since 1900. The number of farms reporting poultry increased 37.5 per cent, and the number of fowls per farm reporting increased from 71 to 85. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has increased from 387 in 1900 to 1,355 in 1910, or 250.1 per cent. The number of colonies of

bees increased from 2,063 to 6,565, or 218.2 per cent, and their value increased from \$10,088 to \$31,650, or 213.7 per cent. The average value of bees per farm reporting was \$26.07 in 1900 and \$23.36 in 1910. About two farms in every hundred report bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity.

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.

Mules.....	210	794	127,465	160.54
Asses and burros.....	50	65	18,563	285.58
Swine.....	1,218	7,426	99,652	13.42
Sheep.....	40	884	5,023	5.68
Goats.....	60	105	563	5.36

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, about three-fourths of which are dairy cows, rank next in importance.

Domestic animals on farms and not on farms: 1910.—The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Number.	Value.	Number.	Value.	Number.	Value.
Total.....		\$129,783,554		\$124,841,010		\$4,942,544
All cattle.....	1,532,309	36,791,442	1,535,276	36,257,234	17,033	534,208
Dairy cows.....	382,039	11,956,108	389,764	11,502,951	12,275	453,157
Horses.....	703,984	77,600,048	669,362	73,442,978	34,622	4,157,070

Sheep.....	612,148	3,007,061	611,264	3,002,038	884	5,023
Goats.....	2,442	11,985	2,337	11,422	105	563

The total value of all domestic animals in the state in 1910 was \$129,784,000, of which the value of animals not on farms represented 3.8 per cent.

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products, for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not

be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	61,046	78.6	369,764	Head
On farms reporting dairy products in 1909.....	47,891	61.7	321,673	Head
On farms reporting milk produced in 1909.....	40,216	51.8	260,224	Head
Specified dairy products, 1909:						
Milk reported.....			82,423,514	Gals.
Butter made.....	39,705	51.1	13,629,047	Lbs.	\$3,024,509	\$0.22
Cheese made.....	64	0.1	14,344	Lbs.	2,011	0.14
Milk sold.....	1,129	1.5	2,385,781	Gals.	350,303	0.15
Cream sold.....	9,197	11.8	2,232,961	Gals.	1,436,094	0.64
Butter fat sold.....	8,962	11.6	5,776,689	Lbs.	1,379,691	0.24
Butter sold.....	19,670	25.3	5,941,092	Lbs.	1,334,308	0.22
Cheese sold.....	18	(¹)	7,380	Lbs.	1,034	0.14
Total receipts from sales, 1909.....					4,501,430
Total value of milk, cream and butter fat sold and butter and cheese made, 1909.....					6,192,608
Specified dairy products, 1899:						
Butter made.....	35,490	67.5	17,400,970	Lbs.
Cheese made.....	228	0.4	136,863	Lbs.
Butter sold.....			10,421,214	Lbs.	1,429,132	0.14
Cheese sold.....			111,758	Lbs.	11,144	0.10

¹ Less than one-tenth of 1 per cent.

The number of farms reporting dairy cows on April 15, 1910, was 61,046, but only 47,891 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 40,216 (considerably less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 260,000. The amount of milk reported was 82,429,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 317 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream,

and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$6,193,000, which may be defined as the total value of dairy products, exclusive of milk and cream used on the farm producing.

Only a very small proportion of the milk reported by South Dakota farmers in 1909 was sold as such, large quantities being sold as butter fat. The butter made on farms in 1909 was valued at \$3,025,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease in the amount of butter made, and a still greater relative decrease in the production of cheese.

Wool: 1909 and 1899.—The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates.¹

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.....	5,033	501,041
Wool produced, as reported, 1909.....	3,032	406,833	2,767,705	\$632,249
On farms reporting sheep April 15, 1910.....	2,824	360,603	380,789	2,589,685	609,601
On other farms.....	208	26,094	178,020	42,648
Total production of wool (partly estimated):					
1909.....			529,088	3,508,246	\$47,012
1899.....			520,219	3,246,945	525,552
Increase, 1899 to 1909.....			8,869	351,301	321,300
Per cent of increase.....			1.7	10.8	61.1

The total number of sheep of shearing age in South Dakota on April 15, 1910, was 501,000, representing a decrease of 1.2 per cent as compared with the number on June 1, 1900 (507,000). The approximate production of wool during 1909 was 529,000 fleeces, weighing

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 2,209 farmers who reported the possession of 140,438 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

3,598,000 pounds, and valued at \$847,000. Of these totals about one-fourth represents estimates. The number of fleeces produced in 1909 was 1.7 per cent greater than in 1899. The average weight per fleece in 1909 was 6.8 pounds, as compared with 6.2 pounds in 1899, and the average value per pound was 24 cents, as compared with 16 cents in 1899.

Goat hair and mohair: 1909.—Although 660 farmers reported 2,337 goats and kids on their farms April 15, 1910, only 54 reported the production of goat hair or mohair during 1909. These farmers reported 399 fleeces, weighing 1,538 pounds and valued at \$390.

Poultry products: 1909 and 1899.—The statement below gives data relative to the production and sale of eggs and poultry:

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.....	61,561	5,251,348		
On farms reporting eggs produced in 1909.....	49,173	4,726,555		
On other farms.....	12,388	524,793		
Eggs produced, as reported, 1909.....	49,646		Dozens. 22,396,021	\$3,791,973
Total production of eggs (partly estimated):				
1909.....			25,067,489	4,244,291
1899.....			17,349,750	1,727,392
Increase, 1899 to 1909.....			7,717,739	2,516,899
Per cent of increase.....			44.5	145.7
Eggs sold, as reported, 1909.....	41,180		14,226,323	2,371,555
Fowls on farms April 15, 1910:				
On farms reporting poultry raised in 1909.....	47,531	4,636,563		
On other farms.....	14,030	614,785		
Poultry raised, as reported, 1909.....	48,115		No. of fowls. 5,462,171	2,079,797
Total poultry raised (partly estimated):				
1909.....			6,186,427	2,355,567
1899.....			1,020,382	1,020,382
Increase, 1899 to 1909.....			1,335,185	1,335,185
Per cent of increase.....			130.9	130.9
Fowls sold, as reported, 1909.....	23,456		1,314,046	570,844

The total number of fowls on South Dakota farms on April 15, 1910, was 5,251,000. Of the 61,561 farms reporting fowls, 12,388 did not report any eggs produced in 1909, and 14,030 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 22,396,000 dozens, valued at \$3,792,000. According to the Twelfth Census reports, the production of eggs in 1899 was 17,350,000 dozens, the value being \$1,727,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total

production of eggs in 1909, including these estimates, was 25,067,000 dozens, valued at \$4,244,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 6,186,000 fowls, valued at \$2,356,000.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The following statement presents statistics relating to the sale or slaughter of domestic animals by South Dakota farmers during the year 1909, with certain items for 1899:

	FARMS REPORTING.			VALUE.	
	Number.	Percent of all farms.	Number of animals.	Total.	Average.
1909—All domestic animals:					
Sold.....				\$35,722,056	
Slaughtered.....				2,637,084	
Calves:					
Sold.....	8,979	11.6	48,862	526,872	\$10.78

1899—All domestic animals:					
Sold.....				12,767,831	
Slaughtered.....				1,567,049	

¹ Less than one-tenth of 1 per cent.

² Schedules called for receipts from sales of animals raised on the farms reporting.

The total value of domestic animals sold during 1909 was \$35,722,000, and that of animals slaughtered on farms \$2,637,000, making an aggregate of \$38,359,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented more than one-half of the total value of animals sold, and the value of the swine sold represented somewhat less than one-third of the total.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting, and the value of those slaughtered during 1899, which amounted, respectively, to \$12,708,000 and \$1,567,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

Honey and wax: 1909.—Although, as noted elsewhere, 1,355 farms reported 6,565 colonies of bees on hand April 15, 1910, 572 of these farms, with 1,369 colonies on hand April 15, 1910, made no report of honey or wax pro-

duced in 1909. The actual returns show the production of 139,714 pounds of honey, valued at \$20,165, and 943 pounds of wax, valued at \$278; the true totals are doubtless somewhat above these figures.

CROPS.

Summary: 1909 and 1899.—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

The total value of crops in 1909 was \$125,507,000. Of this amount, 99.1 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 12,226,772, representing 77.2 per cent of the total improved land in farms (15,827,208 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

	ACRES.				PER CENT OF IMPROVED LAND OCCUPIED.		VALUE OF PRODUCTS.					
	1909	1899	Increase. ¹				1909	1899	Increase. ¹		Per cent of total.

¹ A minus sign (—) denotes decrease.

² Less than one-tenth of 1 per cent.

³ Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The general character of South Dakota agriculture is indicated by the fact that nearly four-fifths (78.8 per cent) of the total value of crops in 1909 was contributed by the cereals, 12.1 per cent by hay and forage, and 5.6 per cent by grains and seeds, other than cereals.

The total value of crops in 1909 was 184.1 per cent greater than in 1899, this increase being no doubt due in part to higher prices. There was an increase of 38.3 per cent in the total acreage of crops for which acreage was reported, the greatest absolute increases being those in the acreage of cereals and of hay and forage.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The next table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, and sundry minor crops.

The leading crops of the state in the order of their importance as judged by total value, are wheat, \$42,878,000; corn, \$26,396,000; oats, \$16,045,000; hay and forage, \$15,244,000; barley, \$10,874,000; flaxseed, \$7,002,000; emmer and spelt, \$2,628,000; and potatoes, \$1,968,000.

From the standpoint of acreage, hay and forage is somewhat more important than wheat, though its

value is only a little more than one-third as great. About one-third of the wheat produced is of the durum or macaroni variety. Oats ranks fourth in acreage and third in value. The acreage of flaxseed is nearly one-third that of oats, while its value is more than two-fifths that of the latter.

Among the hay and forage crops, "wild, salt, or prairie grasses" represent over five-sixths of the total acreage and two-thirds of the total value. "Timothy alone" ranks second, and "timothy and clover mixed," third in both respects. The acreage of hay and forage is a little over two-fifths as great as that of all cereals combined, but the value of the former crop is but little over one-seventh as great as that of the latter.

Broom corn	14	64	35,400	Lbs.	3,408
Tobacco	11	(³)	860	Lbs.	120

¹ Includes small amounts of broom corn seed, peanuts, sorghum cane seed, and sunflower seed.

² The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage, flowers and plants, etc.

³ Reported in small fractions.

The fluctuations in the acreages of some of the principal crops of South Dakota during the past 20 years are shown in the next table.

The acreage of corn is more than two and two-thirds times as great as in 1889, both the absolute and the relative gain during the decade just ended being greater than during that preceding. The increase in the acreage of oats has been very similar to that of corn. The acreage of wheat increased from 2,259,846 in 1889 to 3,984,659 in 1899, representing an advance

of 76.3 per cent, but decreased during the last decade to 3,217,255, which represents a decline of 19.3 per cent. The acreage of barley has made important relative gains in each of the two decades, and increased during the 20 years over 1,000,000 acres. The acreage of flaxseed decreased between 1889 and 1899, but the loss was much more than offset by the increase of the last decade. Hay and forage has made important gains during each of the two decades and in 1910 had an acreage more than twice as great as in 1889.

CROP YEAR.	ACRES HARVESTED.					
	Corn.	Oats.	Wheat.	Barley.	Flaxseed.	Hay and forage.
1909.....	2,037,658	1,558,643	3,217,255	1,114,531	518,566	3,435,656
1899.....	1,196,381	691,167	3,984,659	299,510	302,010	2,287,875
1889.....	753,309	580,289	2,259,846	97,370	354,951	1,554,913

¹ Dakota Territory prior to 1890. In the crop year 1870 the territory had 90,852 acres of corn, 78,226 of oats, 265,295 of wheat, 16,156 of barley, and 183,792 of hay and forage. (Flaxseed not reported.)

The following table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909:

CROP.	PER CENT OF FARMS REPORTING.		PER CENT OF IMPROVED LAND.		Per cent of increase in acres: 1899 to 1909 ¹	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899	1909	1899		1909	1909
Corn.....	63.5	65.8	12.9	10.6	70.3	27.3 Bu.	\$12.95
Oats.....	58.1	61.9	9.8	6.1	125.5	28.0 Bu.	10.29

Hay and forage....	70.7	83.9	21.7	20.3	50.2	1.06 Tons.	4.44
Potatoes.....	57.7	63.0	0.3	0.3	49.1	68.8 Bu.	39.31

¹ A minus sign (-) denotes decrease.

Out of every hundred farms, 71 report hay and forage, 64 report corn, 58 report oats, 58 report potatoes, 51 report wheat, 37 report barley, 19 report flaxseed, and 18 report emmer and spelt. Except in the case of barley the proportion of farmers reporting each of the specified crops for which complete data are given is smaller than it was 10 years ago.

The eight crops included in the above table cover about 77 per cent of the improved land of the state; in 1899 the percentage was about 78 per cent. The most important relative increases in acreages were in barley, oats, flaxseed, and corn. The average value per acre of wheat and corn is above the average of all cereals, \$12.06, while that of the other cereals is below it. The average value per acre of hay and forage is less than two-fifths as great as that of the

combined cereals. The average value of flaxseed is slightly greater and that of potatoes more than three times as great as the average value of the combined cereals.

The greater part of the grain in South Dakota is grown to the east of the Missouri River. Corn is reported from every county except 2, but almost half of the acreage is reported from 12 counties forming a group in the southeast corner of the state. One county only, McPherson, shows a decrease for the past decade in corn acreage. The acreage of oats is more evenly distributed over the eastern part of the state than is that of corn, the oats area in general extending farther to the north; 1 county, McPherson, shows a decrease for the past decade. The wheat area of the state corresponds very closely to the oats area, with, however, the greatest acreages still farther to the north. A group of 22 counties in the eastern and southeastern parts of the state shows a very marked decrease in wheat acreage, while farther to the northwest important increases are reported. The barley acreage is well distributed over the eastern part of the state, and, in general, the greatest gains are reported from the counties which show a falling off in the acreage of wheat. Though the acreage of flaxseed is distributed over the eastern part of the state, more than half of it is reported from 9 counties in the north central part of this section. Decreases are reported from a group of 9 counties in the southeast corner of the state, and from another group of 7 in the northeast corner. The acreage of hay and forage is more evenly distributed over the state than are those of the cereals, important acreages being reported from counties west as well as east of the Missouri.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products:

CROP.	FARMS REPORTING: 1909		ACRES.		VALUE OF PRODUCTS.	
	Num-ber.	Per cent of all farms.	1909	1899	1909	1899
Vegetables, other than potatoes and sweet potatoes and yams, total.....	31,616	40.7	15,150	7,954	\$1,033,163	\$389,717
Farms reporting a product of \$500 or over.....	91	0.1	667	82,852
All other farms.....	31,525	40.6	14,483	950,311
Flowers and plants, total.....	19	(²)	19	11	50,008	3,280
Farms reporting a product of \$250 or over.....	10	(²)	48,733
All other farms.....	9	(²)	1,275
Nursery products, total.....	30	(²)	399	200	70,827	12,886
Farms reporting a product of \$250 or over.....	18	(²)	69,502
All other farms.....	12	(²)	1,325

¹ Does not include 15,715 farms which reported that they had vegetable gardens, but gave no information as to their products.

² Less than one-tenth of 1 per cent.

In 1909 the total acreage of potatoes and other vegetables was 65,209 and their value \$3,001,574. Excluding (so far as separately reported ¹) potatoes and sweet potatoes and yams, the acreage of vegetables was 15,150 and their value \$1,033,000, both acreage and value being decidedly greater than in 1899.

While only 418 acres were devoted in 1909 to the raising of flowers and plants and of nursery products, their value aggregated \$120,835. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

CROP.	Number of farms reporting: 1909	ACRES.		Quantity (quarts): 1909	Value: 1909
		1909	1899		
Small fruits, total.....		419	161	401,285	\$47,263
Strawberries.....	1,836	226	02	238,164	26,724
Blackberries and dewberries.....	112	5	5	6,058	89
Raspberries and loganberries.....	519	66	21	60,285	8,708
Currants.....	1,448	67	38	52,951	6,021
Gooseberries.....	1,271	55	25	43,408	4,926
Cranberries.....	7	(¹)	1	288	25
Other berries.....	3	(¹)	9	141	15

¹ Reported in small fractions.

Strawberries are by far the most important of the small fruits raised in South Dakota, with raspberries and loganberries ranking next. The production in 1909 was 401,000 quarts, as compared with 166,000 quarts in 1899, and the value \$47,263, as compared with \$16,629.

Orchard fruits, grapes, and nuts: 1909 and 1899.—The next table presents data with regard to orchard fruits, grapes, and nuts. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

The total quantity of orchard fruits produced in 1909 was 230,000 bushels, valued at \$209,000. Apples contributed about five-sixths of this quantity, plums and prunes most of the remainder. The production of grapes in 1909 was 144,634 pounds, valued at \$4,789, and that of nuts 73,715 pounds, valued at \$1,511.

The production of all orchard fruits together in 1909 was nearly nine times as great in quantity as that in 1899, and the production of grapes also increased very rapidly. The total value of orchard fruits increased from \$29,568 in 1899 to \$209,339 in 1909, and that of grapes from \$2,158 in 1899 to \$4,789 in 1909. It should be noted in this connection that the values for

¹ It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

CROP.	TREES OR VINES OF BEARING AGE: 1910		TREES OR VINES NOT OF BEARING AGE: 1910		PRODUCT.

Dried fruits.....	32	(¹)	Lbs.....	1,247

¹ Less than one-tenth of 1 per cent.

Forest products: 1909 and 1899.—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount

received from sale of standing timber in 1909." There were 2,612 farms in South Dakota (3.4 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$257,126, as compared with \$106,284 in 1899, an increase of 141.9 per cent. Of the value in 1909, \$161,086 was reported as that of products used or to be used on the farms themselves, \$85,802 as that of products sold or for sale, and \$10,238 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Sugar crops: 1909 and 1899.—The table below shows data with regard to maple trees and their products, and for sugar beets and sorghum cane. The total value of sorghum cane and sirup produced in 1909 was \$5,011, as compared with \$4,795 in 1899.

PRODUCT.	FARMS REPORTING.		Acres.	PRODUCT.

Sirup made.....

¹ Less than one-tenth of 1 per cent.
² Number of trees.

³ Used as root forage.
⁴ Includes cane used as coarse forage.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 241 farmers reported the sale of 3,489 tons of flax straw, valued at \$6,935. In addition, 215 farmers in South Dakota sold, during 1909, 2,521 tons of straw, for which they received \$3,847, and that 84 farmers sold 689 tons of cornstalks and leaves, for which they received \$2,305.

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899.

Over one-half of all farmers in the state (41,180) hire labor, and the total expenditure is \$12,832,000, or an average of \$312 per farm hiring. Of the total

amount expended nearly one-fourth is in the form of rent and board. During the decade 1899 to 1909 the total expenditure for labor increased by \$7,304,000, or 132.1 per cent. For no census prior to 1910 were reports secured of the value of rent and board furnished or tabulation made of the number of farmers reporting expenditures for labor.

Of all farmers, 28 per cent report some expenditure for feed, while only two-tenths of 1 per cent report the purchase of fertilizer. The total amount, \$11,294 reported as paid for fertilizer shows a decrease of \$1,646, or 12.7 per cent, since 1899. The expenditure for fertilizer in 1910 averaged \$61 per farm reporting; that for feed, \$140. No tabulation was made at prior censuses of the number of farmers reporting expenditures for fertilizer.

EXPENSE.	1909		1899	INCREASE. ¹	
	Farms reporting.		Amount.	Amount.	Per cent.
	Number.	Per cent of all farms.			
Labor.....	41,180	53.0	\$12,831,044	\$5,528,070	\$7,303,874 132.1
Feed.....	21,763	28.0	3,049,255	(?)
Fertilizer.....	185	0.2	11,294	12,940	-1,646 -12.7

¹ A minus sign (-) denotes decrease.
² Not reported at the census of 1900.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as of the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Number.	Percent of all farms.	Amount.	Unit.	
Total.....	16,481	21.2	11,568,861	Bu.....	\$16,373,129
Corn.....	16,733	21.6	9,336,813	Bu.....	5,785,248
Oats.....	18,818	24.2	12,665,163	Bu.....	3,632,362
Barley.....	6,831	8.8	152,550	Tons...	6,288,599
Hay and coarse forage...					755,800

While the total amount expended by South Dakota farmers for the purchase of feed in 1909 was \$3,049,000, the total receipts from the sale of feed by those reporting sales amounted to \$16,373,000.

COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair), also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

Change of boundaries.—In comparing the data secured in 1910 with those for 1900, the following changes in county boundaries should be considered: Harding and Perkins Counties were organized from parts of Butte County in 1909; Corson County was organized from that part of Standing Rock Indian Reservation situated in South Dakota in 1909; and a small island, a part of Union County, was ceded to the state of Nebraska in 1908. The unorganized counties of Bennett, Mellette, Sterling, and Todd, located within the limits of Pine Ridge, Rosebud, and Cheyenne River Indian Reservations, have also been formed since 1900.

Counties not reported separately in 1900 or 1910.—Agricultural and population data for Indian reservations were returned separately in 1900, and no data are given for that year for the following counties, located wholly or in part within reservations: Armstrong County in Cheyenne River Reservation; Deway and Schnasse Counties in Cheyenne River and Standing Rock Reservations; Washabaugh County in Pine Ridge and Rosebud Reservations; Tripp County in Rosebud Reservation; and Shannon and Washington Counties in Pine Ridge Reservation.

In 1910 the population of Pine Ridge Indian Reservation was returned separately with the statement, "Comprises unorganized counties of Shannon and Washington, and parts of Bennett and Washabaugh, for which the population was not returned separately." Separate return for population was made for that part of Bennett County outside of the

reservation, but not for Washabaugh. The agricultural data for Indians on the Pine Ridge Reservation in 1910 were assigned to Washington, Shannon, and Washabaugh Counties by estimates.

In 1900 agricultural, but no population, data were returned for Meyer County, which was then located wholly within the Rosebud Indian Reservation. No agricultural data were returned for Meyer County in 1910, as Todd and Mellette Counties had been formed from it since 1900. The 1900 figures for this county

have therefore been included in those for Indian reservations shown in the last column of Tables 1 and 2.

Changes in 1900 figures.—After the volumes of the Twelfth Decennial United States Census (1900) had been printed, a further detailed study and analysis of the data there presented brought to light certain errors in the total farm acreage of Hutchinson County. The corrected acreage is 513,493, and not 525,392 as shown in the county tables.

CHAPTER 4.

STATISTICS OF IRRIGATION FOR THE STATE AND ITS COUNTIES.

Introduction.—This chapter presents the larger part of the statistics of irrigation for South Dakota obtained in connection with the Thirteenth Census. The statistics of the number of farms and acreage irrigated, cost of operation and maintenance, and irrigated crops are for the calendar year 1909; those of irrigation works, cost of enterprises, acreage enterprises were capable of irrigating in 1910, and acreage included in projects are of the date July 1, 1910.

These statistics have been collected under the law of February 25, 1910, which contained the following clause relating to irrigation:

Inquiries shall also be made as to the location and character of irrigation enterprises, quantity of land irrigated in the arid region of the United States and in each state and county in that section under state and Federal laws; the price at which these lands, including water rights, are obtainable; the character and value of crops produced on irrigated lands, the amount of water used per acre for said irrigation and whether it was obtainable from national, state, or private works; the location of the various projects and methods of construction, with facts as to their physical condition; the amount of capital investigated in such irrigation works.

The information called for by this law which could be supplied by farm operators was obtained on supplemental schedules by the regular census enumerators as a part of the agricultural census. The remaining data, which were supplied by the owners or officials of irrigation enterprises, were obtained on special schedules by special agents. The data relating to number of farms irrigated and irrigated crops are taken from the supplemental schedules, while all data relating to acreage irrigated and to irrigation works and their construction and operation are taken from the special schedules.

In accordance with the law, the data collected have been classified primarily by the state and Federal laws by virtue of which the land was brought under irrigation.

Such of the terms used as are not self-explanatory are defined below.

Farms irrigated.—The number of "farms irrigated" is the number of farms on which irrigation is practiced and is equivalent to the term "number of irrigators" used in previous census reports.

Types of enterprise.—The types of enterprise under which the lands irrigated in 1909 are classified are as follows:

United States Reclamation Service enterprises, which operate under the Federal law of June 17, 1902, providing for the construction of irrigation works with the receipts from the sale of public lands.

United States Indian Service enterprises, which operate under various acts of Congress providing for the construction by that service of works for the irrigation of land in Indian reservations.

Carey Act enterprises, which operate under the Federal law of August 18, 1894, granting to each of the states in the arid region 1,000,000 acres of land on condition that the state provide for its irrigation, and under amendments to that law granting additional areas to Idaho and Wyoming.

Irrigation districts, which are public corporations that operate under state laws providing for their organization and management, and empowering them to issue bonds and levy and collect taxes with the object of obtaining funds for the purchase or construction and for the operation and maintenance of irrigation works.

Cooperative enterprises, which are controlled by the water users under some organized form of cooperation. The most common form of organization is the stock company, the stock of which is owned by the water users.

Commercial enterprises, which supply water for compensation to parties who own no interest in the works. Persons obtaining water from such enterprises are usually required to pay for the right to receive water, and to pay, in addition, annual charges based in some instances on the acreage irrigated and in others on the quantity of water received.

Individual and partnership enterprises, which belong to individual farmers or to neighboring farmers, who control them without formal organization. It is not always possible to distinguish between partnership and cooperative enterprises, but as the difference is slight this is unimportant.

Source of water supply.—Of the terms used in the classification according to source of water supply, none requires explanation except "reservoirs." The only reservoirs which are treated as independent sources of supply are those filled by collecting storm water or from watercourses that are ordinarily dry. When reservoirs are filled from streams or wells, the primary source is considered the source of supply.

Acre-foot.—The "acre-foot," used to express the capacity of reservoirs, is the volume of water required to cover 1 acre to a depth of 1 foot, or 43,560 cubic feet.

Cost.—The cost of irrigation enterprises is that given by the owners. For the larger works the cost given is taken, in most cases, from the books of account and represents the actual cost. In the case of most of the private and partnership and many of the cooperative enterprises, however, the works were built by their owners without records of money or labor expended, and the cost given represents the owners' estimates. The cost reported for 1910 includes the cost of construction and of acquiring rights. The latter usually consists of filing fees only. In some instances it includes the purchase price of rights, but these cases are so rare that they are unimportant. The cost reported for 1899 is designated "cost of construction," but probably includes the cost of acquiring rights, as in 1910. The average cost per acre is based on the acreage enterprises were capable of irrigating in 1910 and the cost to July 1, 1910.

IRRIGATION IN SOUTH DAKOTA.

South Dakota lies wholly within the Great Plains, except for a small area in the southwest corner of the state occupied by the Black Hills. Throughout the state the rainfall is sufficient in most seasons for the maturing of some crops without irrigation, the normal annual precipitation ranging from about 23 inches at the eastern boundary to about 15 inches at the western boundary.

Partly because irrigation is not necessary in every year, and partly because of the proximity of the lands which require no irrigation, the practice of irrigation has as yet been less developed in this state than in the states farther to the west.

Irrigation is confined almost wholly to the western part of the state, the counties along the western boundary containing about 84 per cent of the total acreage of irrigated land reported.

The following table shows for the state as a whole the number of farms and acreage irrigated in 1909, in comparison with the total number of farms, the total land area, the total land in farms, and the total acreage of improved land in farms in 1910, together with the areas not yet irrigated for which water has been or is being made available. Comparative figures for the census of 1900 are included as far as possible.

⁴ In 1909.

⁵ In 1899.

⁶ July 1.

⁷ Not reported.

Number of farms irrigated.—According to the figures presented in the table, irrigation was practiced on less than 1 per cent (0.6 per cent) of the farms in the state in 1909. In 1899 the proportion of irrigated farms was higher, 1.2 per cent, while in 1889 it was only 0.4 per cent.

The only counties in which more than 5 per cent of the farms were irrigated in 1909 were Lawrence, Butte, and Custer, in which the proportions were 15.5, 9.3, and 9.2 per cent, respectively.

From 1899 to 1909 there was a decrease of 17.5 per cent in the number of farms irrigated.

Acreage irrigated.—The total acreage reported as irrigated in 1909 was 63,248, as against 43,676 in 1899, and 15,717 in 1889. The percentage of increase from 1889 to 1899 was 177.9, while that from 1899 to 1909 was 44.8. The absolute increase also was greater during the earlier decade, amounting to 27,959 acres, as against 19,572 acres during the later decade.

The fact that, coincident with the increase in acreage irrigated, there was a decrease in the number of farms irrigated, is explained by the abandonment of irrigation on scattered farms throughout the state where it was practiced on a small scale, and the increasing use

of irrigation on a larger scale in the western part of the state. The average acreage irrigated per farm was 126.5 in 1909, as against 72.1 in 1899. During the same period the average size of farms in the state decreased from 362.4 acres to 335.1 acres.

Butte and Pennington Counties were the only counties in which the acreage irrigated in 1909 formed as much as 1 per cent of the total area or as much as 3 per cent of the total land in farms. In three counties, Butte, Custer, and Pennington, the irrigated acreage was equal to more than 10 per cent of the improved land in farms, the percentages being 29.5, 13.7, and 11.2, respectively.

In both 1909 and 1899 the county for which the largest acreage of irrigated land was reported was Pennington, with an irrigated acreage of 19,463 and 14,896 at the respective censuses. One other county, Butte, shows an irrigated acreage in excess of 10,000 in 1909, while in two counties, Custer and Meade, the irrigated area was between 5,000 and 10,000 acres.

Acreage included in projects.—The foregoing table shows that in 1910 existing enterprises were ready to supply water to 128,481 acres, or 65,233 acres more than were irrigated in 1909. It is probable that,

after allowance is made for an increase in the area irrigated in 1910 over that irrigated in 1909, there remained at the close of 1910 under ditch but not irrigated about as much land as was irrigated in the year 1909, and fully three times as much land as was brought under irrigation in the 10 years from 1899 to 1909. The acreage included in projects exceeds the acreage irrigated in 1909 by 138,377 acres, which is more than seven times the acreage brought under irrigation in the last decade and more than twice the acreage irrigated in 1909. This acreage represents the area which will be available for the extension of irrigation in the next few years upon the completion of existing enterprises and without new undertakings.

Acreage irrigated, classified by character of enterprise.—The following table gives the distribution of the acreage irrigated in 1909 according to the character of the enterprise controlling the irrigation works:

CHARACTER OF ENTERPRISE.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribution.
All classes	63,248	100.0
U. S. Reclamation Service	5,613	8.9
U. S. Indian Service	50	0.1
Cooperative enterprises	13,601	21.5
Commercial enterprises	6,300	10.0
Individual and partnership enterprises	37,684	59.6

There are no Carey Act enterprises or irrigation districts in South Dakota. Cooperative enterprises and individual and partnership enterprises supplied water to about 81 per cent of the acreage irrigated in 1909, while United States Reclamation Service enterprises which are eventually to be turned over to the water users, supplied 8.9 per cent of the acreage irrigated. Thus only 10 per cent of the irrigated land was supplied by enterprises which are not either controlled by the water users or to be turned over to them ultimately.

Acreage irrigated, classified by source of water supply.—The following table shows the distribution of the acreage irrigated in 1909 according to the source of water supply:

SOURCE OF WATER SUPPLY.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribution.
All sources	63,248	100.0
Streams	47,662	75.4
Lakes	200	0.3
Wells	1,456	2.3
Springs	395	0.6
Reservoirs	13,535	21.4

Streams constituted the source of water supply for about three-fourths of the land irrigated in 1909 and reservoirs for slightly more than one-fifth of this total.

Irrigation from reservoirs is practiced principally on the higher areas where for large parts of the land a water supply from streams is not available and the storage of storm waters affords the only means of irrigation.

The acreage irrigated from wells in 1909 was considerably smaller than that supplied from this source in 1899, the advance of dry farming and a heavier rainfall in 1909 than in some previous years having led to the abandonment of irrigation from some of the artesian wells in the eastern and central parts of the state. These wells, however, will be used again in dry years.

IRRIGATION WORKS.

The following table summarizes the data collected relating to works for supplying water for irrigation in 1910 and 1900. As only two of the items reported in 1910 were reported in 1900, there is little opportunity for comparisons between the two censuses.

IRRIGATION WORKS.	CENSUS OF—	
	1910	1900 ¹
Independent enterprises.....number..	395	(?)
Ditches, total length.....miles..	1,256	(?)
Main ditches.....number..	348	188
Length.....miles..	631	223
Capacity.....cubic feet per second..	3,598	(?)
Lateral ditches.....number..	332	(?)
Length.....miles..	625	(?)
Reservoirs.....number..	314	(?)
Capacity.....acre-feet..	216,205	(?)
Flowing wells.....number..	42	(?)
Capacity.....gallons per minute..	14,382	(?)
Pumped wells.....number..	4	(?)
Capacity.....gallons per minute..	24	(?)
Pumping plants.....number..	8	(?)
Engine capacity.....horsepower..	63	(?)
Pump capacity.....gallons per minute..	5,289	(?)

¹ Figures relate only to systems obtaining water from streams by gravity diversion in 1899.

² Not reported.

Assuming that the enterprises in operation in 1909 were identical with those reported in 1910, the average acreage irrigated per enterprise was 160.1, and the acreage irrigated per mile of main ditch was 100.2. For the enterprises represented by the figures from the preceding census, which include only systems receiving water from streams, the average acreage irrigated per mile of main ditch was 172.4.

There was at one time considerable utilization of underground water for irrigation in South Dakota, especially from flowing wells in the eastern part of the state, but, as already stated, wells were not so extensively used in 1909 as in 1899. Previous reports do not show the number of artesian wells used for irrigation, but the fact that the acreage irrigated from such wells has decreased greatly suggests a corresponding decrease in the number of wells used for irrigation.

Cost of construction, operation, and maintenance.—The next table presents statistics in regard to the cost of construction, operation, and maintenance of irrigation enterprises.

	CENSUS OF—		INCREASE.	
	1910	1900	Amount.	Per cent.
Cost of irrigation enterprises.....	¹ \$3,043,140	² \$284,747	\$2,758,393	968.7
Average per acre.....	³ \$23.69	⁴ \$6.52	(⁵)	
Estimated final cost of existing enterprises.....	\$3,800,556	(⁶)		
Average per acre included in projects.....	\$18.85	(⁶)		
Operation and maintenance:				
Acreage for which cost is reported.....	25,514	(⁶)		
Total cost reported.....	⁷ \$10,288	(⁶)		
Average cost per acre.....	\$0.64	⁸ \$0.23	\$0.41	178.3

¹ Reported July 1.² Cost of systems operated in 1899.³ Based on acreage enterprises were capable of irrigating in 1910.⁴ Based on acreage irrigated in 1899.⁵ Figures not comparable. (See explanation in text.)⁶ Not reported.⁷ For 1909.⁸ Figure relates only to systems obtaining water from streams.

The cost of irrigation systems shows an increase of 968.7 per cent. In the average cost per acre, as given in the table, there was also a large increase. The average cost per acre shown for the census of 1910 is based on the acreage under ditch in that year, but since the corresponding acreage for 1900 was not reported, the figure for the average cost at the earlier census is based on the acreage actually irrigated in 1899. If computed on the basis of the acreage irrigated in 1909, the average cost in 1910 would be \$48.11, representing an increase of 637.9 per cent over the figure for the average cost at the census of 1900. The high average cost per acre is due in part to the considerable expenditures made on a large project which was nearly completed, but which was not used to its full capacity, and was ready to supply water to only a part of the acreage the enterprise is intended to supply. The average, based on the estimated final cost and the acreage included in projects, \$18.85 per acre, probably represents the average cost per acre of irrigation in South Dakota more exactly than either of the averages referred to above.

Among the counties for which separate figures are given in the table, the lowest average cost per acre enterprises were capable of irrigating in 1910, \$5.09, is in Pennington, which contained a larger irrigated acreage in 1909 than any other county and a larger acreage that enterprises were capable of irrigating in 1910 than any other except one. The highest average cost per acre, \$42.81, is in Butte County, where large expenditures have been made on uncompleted projects. The estimated final cost per acre included in projects in Butte County, \$28.03, is likewise the highest reported for the counties of the state.

The acreage for which cost of operation and maintenance in 1909 was reported constitutes 40.3 per cent of the total acreage reported as irrigated in 1909 and

99.8 per cent of the acreage reported as irrigated by other than individual and partnership enterprises.

CROPS.

The following table shows the acreage, yield, and value of the principal crops grown under irrigation in 1909:

CROP.	IRRIGATED CROPS: 1909				
	Acreage.	Yield,			Value.
		Unit.	Amount.	Average per acre.	
Cereals:					
Corn.....	1,166	Bu....	25,476	21.8	\$17,532
Oats.....	2,526	Bu....	91,045	36.0	42,035
Wheat.....	1,329	Bu....	25,590	19.3	21,100
Barley.....	317	Bu....	6,086	19.2	3,143
Other seed:					
Alfalfa seed.....	137	Bu....	293	2.1	2,196
Hay and forage:					
Timothy alone.....	1,927	Tons..	3,352	1.74	25,290
Timothy and clover mixed.....	2,116	Tons..	3,189	1.51	21,229
Alfalfa.....	10,005	Tons..	28,520	2.85	160,414
Wild, salt, or prairie grasses.....	17,652	Tons..	20,334	1.15	145,667
Sundry crops:					
Potatoes.....	439	Bu....	35,668	81.2	25,049
Orchard fruits.....	327				17,688

Acreage.—While small quantities of crops other than those shown in the table are grown on irrigated land, the acreage reported for no one of these crops is as much as 100.

The irrigated acreage in alfalfa formed 15.1 per cent of the total acreage of that crop in the state in 1909, and the irrigated acreage in alfalfa seed 5.4 per cent of the total for that crop. The fact that these are the only crops in the state of which as much as 2 per cent of the total acreage was irrigated in 1909 shows that irrigation is a very small factor in South Dakota agriculture.

Of the crops shown in the table, "wild, salt, or prairie grasses" have the largest irrigated acreage, representing 46.5 per cent of the total irrigated acreage of the crops given. Alfalfa is next, with 26.4 per cent of this total, and is followed by oats, with 6.7 per cent, "timothy and clover mixed," with 5.6 per cent, and "timothy alone," with 5.1 per cent. No other single crop covered as much as 5 per cent of the total acreage of the irrigated crops presented in the table.

COUNTY TABLE.

The next table gives in detail, for the state and principal counties, the data summarized in this section, except those relating to crops.

Change of boundaries.—In comparing the data secured in 1910 with those from the census of 1900, it should be borne in mind that Harding and Perkins Counties were organized from parts of Butte County in 1909.

CHAPTER 5.

STATISTICS OF MANUFACTURES FOR THE STATE, CITIES, AND INDUSTRIES.

Introduction.—This chapter gives the statistics of manufactures for the state of South Dakota for the calendar year 1909, as shown by the Thirteenth Census.

The text summarizes the general results of the census inquiry, presenting a series of special tables in which the main facts printed in the general tables are given in convenient form for the state as a whole and for important industries. It also presents tables in which the statistics for the industries of the state as a whole and for a few important industries are classified by character of ownership, size of establishments, number of wage earners, and prevailing hours of labor, information which could not be presented in general tables for each industry without disclosing the facts for individual establishments.

At the end of the chapter are three general tables.

Table I gives for 1909, 1904, and 1899 the number of establishments and of persons engaged in the industries, primary power, capital, salaries and wages, cost of materials, value of products, and value added by manufacture reported for all industries combined and for certain important industries for the state as a whole. It also gives the same items for all industries combined for Sioux Falls and Aberdeen, cities which had in 1910 a population of over 10,000 but less than 50,000.

Table II gives statistics in greater detail for 1909 for the state and for a larger number of industries.

Table III gives statistics in detail for 1909 for all industries combined for each city having from 10,000 to 50,000 inhabitants.

Scope of census: Factory industries.—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of organization, location of establishments, size of establishments, labor force, and similar subjects. When use is made of the data for these purposes it is imperative that due attention should be given to the limitations of the figures. Particularly is this true when the attempt is made to derive from them figures purporting to show average wages, cost of production, or profits. These limitations will be fully discussed in the general report on manufactures for the United States as a whole.

The census of 1909, like that of 1904, was confined to manufacturing establishments conducted under the factory system, as distinguished from the neighborhood, hand, and building industries. Where statistics for 1899 are given they have been reduced to a comparable basis by eliminating the latter classes of industries. The census does not include establishments which were idle during

the entire year, or had a value of products of less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions, or in governmental establishments, except those of the Federal Government.

Period covered.—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for establishments which began or discontinued business during the year.

The establishment.—The term "establishment" comprises the factories, mills, or plants which are under a common ownership or control, and for which one set of books of account is kept.

If, however, the plants constituting an establishment as thus defined were not all located within the same city or state, separate reports were secured in order that the separate totals might be included in the statistics for each city or state. In some instances separate reports were secured for different industries carried on in the same establishment.

Classification by industries.—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products very different from those covered by the class designation, and, on the other hand, may not include the total product covered by this designation, because some part of this product may be made in establishments in which it is not the product of chief value.

Selected industries.—The general tables at the end of this chapter give the principal facts separately for the industries of the state. A selection has been made of the leading industries of the state for more detailed consideration. Sometimes an industry of greater importance than some of those selected is omitted because it comprises so few establishments that these detailed presentations would reveal the operations of individual concerns.

Comparisons with previous censuses.—Owing to the changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. Table I, giving comparable figures for 1909, 1904, and 1899, therefore, does not embrace all the industries shown for 1909 in Table II.

Influence of increased prices.—In considering changes in cost of materials, value of products, and value added by manufacture, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures can not be taken as an exact measure of increase in the volume of business.

Persons engaged in industry.—At the censuses of 1909, 1904, and 1899, the following general classes of persons engaged in manufacturing industries have been distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks, and (5) wage earners. In the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. The second group included the three classes of salaried officers of corporations, superintendents and managers, and clerks. In the present census an entirely different grouping is employed: That into (1) proprietors and officials, (2)

clerks, and (3) wage earners. The first group includes proprietors and firm members, salaried officers of corporations, and superintendents and managers.

At this census the number of persons engaged in the industries, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for December 15, or the nearest representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where conditions were exceptional, and particularly in the case of certain seasonal industries, the December date could not be accepted as typical and an earlier date had to be chosen.

In the case of employees other than wage earners the number thus reported on December 15, or other representative day, has been treated as equivalent to the average for the year, since the number of employees of this class does not vary much from month to month in a given industry. In the case of wage earners the average is obtained in the manner explained in the next paragraph.

Wage earners.—In addition to the report by sex and age of the number of wage earners on December 15, or other representative day, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported each month by 12. The average thus obtained represents the number of wage earners that would be required to perform the work done if all were constantly employed during the entire year. Accordingly, the importance of any industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given for each separate industry, is not totaled for all industries combined, because in view of the variations of date such a total is believed not to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation.

In particular, totals by sex and age for the wage earners reported for the representative day would be misleading because of the undue weight given to seasonal industries, in some of which, such as canning and preserving, the distribution of the wage earners by sex and age is materially different from that in most industries of more regular operation. In order to determine as nearly as possible the sex and age distribution of the average number of wage earners in the state as a whole, the following procedure has been adopted:

The percentage distribution by sex and age of the wage earners in each industry, for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. This percentage has been applied to the average number of wage earners for the year in that industry, to determine the average number of men, women, and children employed. These calculated averages for the several industries have been added up to give the average distribution for the state as a whole.

In 1899 and 1904 the schedule called for the average number of wage earners of each sex 16 years and over, and the total number under 16 years of age, for each month, and these monthly statements were combined in an annual average. Comparatively few manufacturing concerns, however, keep their books in such way as to show readily the number of men, women, and children (under 16) employed each month. These monthly returns by sex and age were, in fact, largely estimates. It was believed that a more accurate and reliable sex and age distribution could be secured by taking as a basis of estimate the actual numbers employed on a single day.

Prevailing hours of labor.—The census made no attempt to ascertain the number of employees working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one period to another are disregarded, and no attention is given to the fact that a limited number of employees

may have hours differing from those of the majority. In the tables all the wage earners of each establishment are counted in the class within which the establishment itself falls. In most establishments, however, all or practically all the employees work the same number of hours, so that these figures give a substantially correct picture of the hours of labor in manufacturing industries.

Capital.—For reasons stated in prior census reports, the statistics of capital secured by the census canvass are so defective as to be without value, except as indicating very general conditions. The instructions on the schedule for securing capital were as follows:

The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises.

Materials.—Cost of materials refers to the materials used during the year, which may be more or less than the materials purchased during the year. The term materials includes fuel, rent of power and heat, mill supplies, and containers, as well as materials forming a constituent part of the product. Fuel includes all fuel used, whether for heat, light, or power, or for the process of manufacture.

Expenses.—Under "Expenses" are included all items of expense incident to the year's business, except interest, whether on bonds or other forms of indebtedness, dividends on stocks, and allowances for depreciation.

Value of products.—The value of products for any industry includes the total value of all products manufactured in establishments whose products of chief value fall under the industry designation. The amounts given represent the selling value at the factory of all products manufactured during the year, which may differ from the value of the products sold. Amounts received for work on materials furnished by others are included.

Value added by manufacture.—The value of products is not a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing process carried on in the industry itself. Another part of it, and often by far the larger part, represents the value of the materials used, which have been produced by agriculture or mining or by other industrial establishments. For many purposes, therefore, the best measure of the importance of different classes of industry is the value created as the result of the manufacturing operations carried on within the industry. This value is obtained by deducting the cost of the materials consumed from the value of the product. The figure thus obtained is termed in the census reports "value added by manufacture."

There is a further statistical advantage which "value added" has over gross value of products. In combining the value of products for all industries the value of products produced by one establishment and used as materials in another is duplicated, and the total, therefore, gives a greatly exaggerated idea of the wealth created. No such duplication takes place in the total "value added by manufacture."

Cost of manufacture and profits.—Census data do not show the entire cost of manufacture, and consequently can not be used to show profits. No account has been taken of interest and depreciation. Even if the amount of profit could be determined by deducting the expenses from the value of the products the rate of profit on the investment could not properly be calculated, because of the very defective character of the returns regarding capital.

Primary power.—The figures given for this item show the total of the primary power used by the establishments. They do not cover the power developed by motors operated by such power, the inclusion of which would evidently result in duplication.

Location of establishments.—The Census Bureau has classified establishments by their location in cities or classes of cities. In interpreting these figures due consideration should be given to the fact that often establishments are located just outside the boundaries

of cities, and are necessarily so classified, though locally they are looked upon as constituting a part of the manufacturing interests of the cities.

Laundries.—The census of 1909 was the first to include statistics of laundries. The reports are confined to establishments using mechanical power. The data are presented separately and are not

included in the general total for manufacturing industries, in order to avoid interference with comparisons with prior censuses.

Custom sawmills and gristmills.—In order to make the statistics for 1909 comparable with those for 1904 the data for these mills have been excluded from all the tables presenting general statistics, and are given in a separate table at the end of this chapter.

INDUSTRIES IN GENERAL.

General character of the state.—South Dakota ranks fourteenth in size among the states and territories of continental United States, having an area of 77,650 square miles, of which 76,850 square miles represent land surface. Its population in 1910 was 583,888, as compared with 401,570 in 1900 and 348,600 in 1890. It ranked thirty-sixth among the 49 states and territories as regards population in 1910 and thirty-eighth in 1900.

Lying in the Great Plains region and, with the exception of the Black Hills district, consisting of rolling upland, South Dakota is essentially an agricultural state. In 1910 only 13.1 per cent of the entire population of the state resided in incorporated cities and towns having a population of 2,500 or over, as against 10.2 per cent in 1900. The density of population in 1910 was 7.6 persons per square mile, as compared with 5.2 in 1900. Sioux Falls and Aberdeen were the

only cities with a population of more than 10,000 in 1910. The eastern part of the state and the mining region of the southwest corner are well provided with transportation facilities. Nearly every county east of the Missouri River has one or more railroads.

Importance and growth of manufactures.—The agricultural and mining industries of South Dakota are of much more importance than its manufactures. The increase, however, in the number of manufacturing establishments from 1899 to 1909, and that in the average number of wage earners engaged in manufactures, has kept pace with the general increase in population.

The following table gives the more important figures relative to all classes of manufactures combined for the state as returned at the censuses of 1909, 1904, and 1899, together with percentages of increase from census to census:

	NUMBER OR AMOUNT.			PER CENT OF INCREASE. ¹	
	1909	1904	1899	1904-1909	1899-1904

¹ A minus sign (—) denotes decrease.

² Figures not available.

In 1909 the state of South Dakota had 1,020 manufacturing establishments, which gave employment to an average of 5,226 persons during the year and paid out \$2,914,000 in salaries and wages. Of the persons employed, 3,602 were wage earners. These establishments turned out products to the value of \$17,870,000, to produce which materials costing \$11,476,000 were consumed. The value added by manufacture was thus \$6,394,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

During the last five years the percentages of increase in value of products, value added by manufacture,

total expenses, and cost of materials were about the same as in the preceding five years, 1899-1904, but the percentages of increase in the number of wage earners and the amount paid in wages were considerably greater.

As pointed out in the Introduction; it would be improper to infer that manufactures increased in volume during the period 1904-1909 to the extent indicated by these figures regarding values, since the increase shown is certainly due, in part, to the increase that has taken place in the price of commodities.

The relative importance and growth of the leading manufacturing industries of the state are shown in the next table.

INDUSTRY.	Number of establishments.	WAGE EARNERS.		VALUE OF PRODUCTS.		VALUE ADDED BY MANUFACTURE.		PER CENT OF INCREASE. ¹

¹ Percentages are based on figures in Table I; a minus sign (-) denotes decrease. Where the percentages are omitted, comparable figures can not be given.

It should be borne in mind, in considering this table, that the value of products in some of the industries involves a certain amount of duplication, due to the use of the products of one establishment in the industry as material for another establishment.

The most important industries listed in this table, in which they are arranged in the order of the value of products, call for brief consideration.

Flour-mill and gristmill products.—The statistics show that this industry continues to lead in value of products, reporting in 1909 more than one-third of the total value of products for the state. Compared with the returns, however, for 1904, there has been a decrease of 4.8 per cent in the value of products and of 24.9 per cent in value added by manufacture.

Butter, cheese, and condensed milk.—The establishments reported for this industry are engaged primarily in the manufacture of butter, no cheese or condensed milk being produced in 1909. This industry increased much more rapidly during the period from 1899 to 1904 than during the latter half of the decade.

Printing and publishing.—Over one-third of the total number of manufacturing establishments and nearly one-fourth of the total number of wage earners of the state are engaged in this industry. The 392 establishments embraced 378 publishers of newspapers and periodicals, 13 job printing offices, and one bookbinding establishment.

Bread and other bakery products.—An increase of nearly 200 per cent was shown in the value of the bakery products reported for 1909, as compared with 1904.

Lumber and timber products.—The development of this industry in South Dakota during the last five years is shown in the increase in value of products and in value added by manufacture. The former item decreased 23.8 per cent from 1899 to 1904, but increased 150.7 per cent from 1904 to 1909, and the latter item decreased 7.6 per cent during the earlier

period and increased 112.9 per cent during the later. The increase in the later five-year period is due partly to the large increase in the cut of western yellow pine during this period as well as to an advance in the price of this timber, which constitutes almost the entire lumber cut of South Dakota.

The above table shows that when these five leading industries are ranked according to value added by manufacture the order differs considerably from that when the ranking is by value of products. In value added by manufacture the leading industry is printing and publishing, which ranked third in value of products. It leads also in the number of wage earners employed.

This table shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture.

In some of the less important industries the percentage of increase in value of products from 1904 to 1909 was very large, amounting to over 300 per cent in two industries—artificial stone and carriages and wagons.

In addition to the 14 industries presented separately, there are 7 other industries each of which had a value of product in 1909 in excess of \$100,000. They are included under the head of "All other industries" because, if they were shown separately, the operations of individual establishments would be disclosed, or because the data for prior censuses are not available or comparable, or because the returns do not properly present the true condition of the industry, for the reason that it is more or less interwoven with one or more industries of similar character. These 7 industries are: Automobiles, including bodies and parts; cement; men's clothing, including shirts; copper, tin, and sheet-iron products; marble and stone work; mineral and soda water; and slaughtering and meat packing. The 1909 statistics, however, for the manufacture of copper, tin, and sheet-iron products and marble and stone work will be found in Table II.

Persons engaged in manufacturing industries.—The following table shows the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

CLASS.	PERSONS ENGAGED IN MANUFACTURES.		
	Total.	Male.	Female.
All classes.....	5,226	4,588	638
Proprietors and officials.....	1,227	1,188	39
Proprietors and firm members.....	942	906	36
Salaried officers of corporations.....	96	95	1
Superintendents and managers.....	189	187	2
Clerks.....	397	255	142
Wage earners (average number).....	3,602	3,145	457
16 years of age and over.....	3,556	3,099	457
Under 16 years of age.....	46	46

The average number of persons engaged in manufactures during 1909 was 5,226. Of these, 3,602 were wage earners. Of the remainder, about three-fourths were proprietors and officials and about one-fourth were clerks. Corresponding figures for individual industries will be found in Table II.

The following table shows the percentage of proprietors and officials, clerks, and wage earners, respectively, and the total number of persons employed in manufactures. It covers all industries combined and five important industries individually.

INDUSTRY.	PERSONS ENGAGED IN MANUFACTURES.			
	Total number.	Per cent of total.		
		Proprietors and officials.	Clerks.	Wage earners (average number).
All industries.....	5,226	23.5	7.6	68.9
Bread and other bakery products.....	431	27.4	6.3	66.4
Butter, cheese, and condensed milk.....	252	32.1	12.7	55.2
Flour-mill and gristmill products.....	454	30.2	7.0	62.8
Lumber and timber products.....	534	13.1	2.4	84.5
Printing and publishing.....	1,387	30.1	10.5	59.5
All other industries.....	2,168	18.6	6.8	74.5

Of the total number of persons engaged in all manufacturing industries, 23.5 per cent were proprietors and officials, 7.6 per cent clerks, and 68.9 per cent wage earners. The proportion of proprietors and officials is much greater than in states where the manufacturing industries are developed highly, for the reason that in South Dakota a very large proportion of the establishments are small and the work done largely by the proprietors or by their immediate representatives.

The following table shows, in percentages, for all industries combined, the distribution of the average number of wage earners by age periods and sex, calculated in the manner described in the Introduction. It also shows, for some of the important industries

separately, the percentage distribution, by age periods and sex, of the wage earners as reported for December 15 or the nearest representative day. As a means of judging the importance of the several industries the average total number employed for the year is also given in each case.

INDUSTRY.	WAGE EARNERS.			
	Average number. ¹	Per cent of total.		
		16 years of age and over.		Under 16 years of age.
		Male.	Female.	
All industries.....	3,602	86.0	12.7	1.3
Bread and other bakery products.....	286	65.7	32.9	1.4
Butter, cheese, and condensed milk.....	139	95.7	4.3
Flour-mill and gristmill products.....	285	99.6	0.4
Lumber and timber products.....	451	99.8	0.2
Printing and publishing.....	825	69.5	28.0	2.5
All other industries.....	1,616	91.0	7.8	1.2

¹ For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

For all industries combined, 86 per cent of the average number of wage earners were males over 16 years of age; 12.7 per cent, females over that age; and 1.3 per cent, all persons under the age of 16. The largest part of the total number of female wage earners over 16 years of age and of children under that age were confined to the bakery and printing industries combined. In the bakery industry about one-third of the total wage earners employed were females, and in the printing industry about three-tenths of the total employees were of that class.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

CLASS.	PERSONS ENGAGED IN MANUFACTURES.				
	1909		1904		Per cent of increase, 1904-1909.
	Number.	Per cent distribution.	Number.	Per cent distribution.	
Total.....	5,226	100.0	3,582	100.0	45.9
Proprietors and firm members.....	942	18.0	649	18.1	45.1
Salaried employees.....	682	13.0	441	12.3	54.6
Wage earners (average number).....	3,602	68.9	2,492	69.6	44.5

Comparable figures are not obtainable for 1899. The table shows a somewhat greater percentage of increase in the salaried employees than in the other two classes.

The next table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

CLASS.	AVERAGE NUMBER OF WAGE EARNERS.					
	1909		1904		1899	
	Number.	Percent distribution.	Number.	Percent distribution.	Number.	Percent distribution.
Total.....	3,602	100.0	2,492	100.0	2,224	100.0
16 years of age and over..	3,556	98.7	2,459	98.7	2,114	95.1
Male.....	3,099	86.0	2,179	87.4	2,033	91.4
Female.....	457	12.7	280	11.2	81	3.6
Under 16 years of age.....	46	1.3	33	1.3	110	4.9

This table indicates that very few children are employed in the manufacturing industries of the state and that the present proportion of children is less than it was 10 years ago, although there was a slight increase in the number from 1904 to 1909.

From 1904 to 1909, as well as from 1899 to 1904, there was a proportional and actual increase in the employment of female wage earners.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909, for all industries combined, for the lumber industry, and for all other industries combined; it gives also the percentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 672, is shown, for each industry in the state, the largest number and also the smallest number of employees reported for any month. The number for each month relates to the 15th day, or the nearest representative day, of that month.

MONTH.	WAGE EARNERS.									
	All industries.		Lumber and timber products.						All other industries.	
			Total.		In mills.		In logging operations.			
	Number.	Per cent of maximum.	Number.	Per cent of maximum.	Number.	Per cent of maximum.	Number.	Per cent of maximum.	Number.	Per cent of maximum.
January.....	3,108	79.2	331	58.9	188	50.1	143	75.3	2,777	81.1
February.....	3,235	82.4	405	82.7	275	73.3	190	100.0	2,770	80.9
March.....	3,374	86.0	486	86.5	296	78.9	190	100.0	2,888	84.3
April.....	3,373	85.0	369	65.7	240	64.0	129	67.9	3,004	87.7
May.....	3,543	90.3	386	68.7	284	75.7	102	53.7	3,157	92.2
June.....	3,763	95.9	476	84.7	343	91.5	133	70.0	3,287	96.0
July.....	3,824	97.4	515	91.6	363	90.8	152	80.0	3,309	96.6
August.....	3,779	96.3	394	70.1	291	77.6	103	54.2	3,385	98.8
September.....	3,925	100.0	500	89.0	351	93.6	149	78.4	3,425	100.0
October.....	3,860	98.3	497	88.4	335	89.3	162	85.3	3,363	98.2
November.....	3,869	98.6	562	100.0	375	100.0	187	98.4	3,307	96.6
December.....	3,572	91.0	434	77.2	291	77.6	143	75.3	3,138	91.6

The lumber industry shows more fluctuations in the number of wage earners employed than any other important industry. The greatest activity in logging operations is shown for February and March. In the mills the minimum number of wage earners was employed in January, the number fluctuating until November, when the maximum number was employed. For all industries combined the number of wage earners employed was lowest in January and increased gradually until reaching the maximum in September.

Prevailing hours of labor.—In the following table wage earners have been classified according to hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year is used, and the number employed in each establishment is classified as a total, according to the hours prevailing in that establishment, even though some few employees work a greater or less number of hours.

INDUSTRY.	AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.								
	Total.	48 and under.	Between 48 and 54.	54.	Between 54 and 60.	60.	Between 60 and 72.	72.	Over 72.
All industries.....	3,602	516	82	748	40	1,932	131	39	116
Artificial stone.....	104	19	3	3	98	1	14	4	
Bread and other bakery products.....	286	19	3	26	219	1	14	4	
Brick and tile.....	54	7	10	10	44	29			
Butter, cheese, and condensed milk.....	139	7	18	18	85	29			
Carriages and wagons and materials.....	43				43	14			
Cars and general shop construction and repairs by steam-railroad companies.....	327				313	14			
Confectionery.....	106			33	73				
Flour-mill and gristmill products.....	285	28	9	9	175	48	25		
Foundry and machine-shop products.....	78	2	4	4	72				
Gas, illuminating and heating.....	108	6	1	1	36	37			12
Liquors, malt.....	76	15	43	43	18				
Lumber and timber products.....	451	8	3	13	425	2			
Marble and stone work.....	116	8	83	83	21				
Printing and publishing.....	825	207	73	447	91				
Tobacco manufactures.....	203	198	3	3	2				
All other industries.....	396	18	53	53	212				100

It appears from these figures that a majority of the wage earners employed in the manufacturing industries of South Dakota are employed 60 hours or over per week, the proportion being 61.6 per cent of all wage earners. The artificial stone industry, the bakeries, the railroad repair shops, the flour mills, and the lumber mills and logging camps were mainly on a 10-hour-per-day basis (60 hours per week). Shorter hours prevail in printing and publishing, 88.1 per cent of the total number of wage earners in that industry being employed in establishments running 54 hours or less per week. Eight hours per day were the prevailing hours in the tobacco industry.

Location of establishments.—The following table shows the distribution of manufacturing between cities having a population of 10,000 or over and the remainder of the state. (See Introduction.)

ITEM.	Year.	Total.	LOCATION OF ESTABLISHMENTS.		PER CENT OF TOTAL.	
			In cities with population of 10,000 and over.	Outside districts.	In cities with population of 10,000 and over.	Outside districts.
Population.....	1910	583,883	24,847	559,041	4.3	95.7
	1900	401,570	10,266	391,304	2.6	97.4
Number of establishments.	1909	1,020	120	900	11.8	88.2
	1904	686	61	625	8.9	91.1
	1899	624	43	576	7.7	92.3
Average number of wage earners.	1909	3,602	972	2,630	27.0	73.0
	1904	2,492	465	2,027	18.7	81.3
	1899	2,224	311	1,913	14.0	86.0
Value of products.	1909	\$17,870,135	\$4,464,069	\$13,406,066	25.0	75.0
	1904	13,085,333	1,897,790	11,187,543	14.5	85.5
	1899	9,529,946	833,624	8,696,322	9.3	90.7
Value added by manufacture.	1909	6,393,785	1,823,764	4,570,021	28.5	71.5
	1904	4,388,502	832,097	3,556,405	19.0	81.0
	1899	3,046,269	602,096	2,444,173	18.5	81.5

At the census of 1900 Sioux Falls was the only city having over 10,000 inhabitants, but in 1910 Aberdeen became a city of that class. The population for the census of 1900 was used in grouping data for 1904 as well as for 1899. The addition, therefore, of Aberdeen in 1909 accounts in part for the relatively large increase in urban manufactures during the period 1904-1909.

Character of ownership.—The next table has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909 only are presented for five important industries.

INDUSTRY AND CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.
ALL INDUSTRIES:				
1909.....	1,020	3,602	\$17,870,135	\$6,393,785

Other.....	1.5	0.2	0.4	0.4

The proportion of establishments operated by firms was smaller in 1909 than in 1904 and the proportion under corporate ownership considerably larger. In addition, the establishments operated by individuals and by firms reported smaller proportions of the total average number of wage earners, the total value of products, and the total value added by manufacture in 1909 than in 1904. In 1909 corporations reported more than half the totals for each of these items, a much larger proportion than they reported at the preceding census. Of the value of products reported by the flour-mill and gristmill industry and by the lumber industry, 63.5 per cent and 66.8 per cent, respectively, are returned by establishments under this form of ownership. Of the 61 establishments classified as under "Other" forms of ownership,

45 were engaged in making butter and were operated under the cooperative form of ownership.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it, the following table groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately, as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.	INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

¹ Includes the group "\$100,000 and less than \$1,000,000."

This table shows that, in 1909, of the 1,020 establishments, only 36, or 3.5 per cent, had a value of products exceeding \$100,000. These establishments, however, had a total average number of wage earners of 1,110, or 30.8 per cent of the total for the state; 43.7 per cent of the total value of products; and 32.1 per cent of the total value added by manufacture. On the other hand, the very small establishments—that is, those having a value of products of less than

\$5,000—represented more than one-half (52.3 per cent) of the total number of establishments, while the average number of wage earners employed in them formed only 15.5 per cent of the total, and the value of their products only 7.1 per cent.

The fact that the average value of products per establishment decreased from \$19,075 to \$17,520, and the average value added by manufacture from \$6,397 to \$6,268, is due chiefly to the disproportionate

increase in the number of very small establishments. Out of a total increase of 334 establishments, there were 214 each of which had a product valued at less than \$5,000. There was no change in the average number of wage earners per establishment. Considering only the five leading industries which are included in the table, the average value of products per establishment varies from \$5,041 for the printing and publishing industry to \$65,350 for flour mills and gristmills.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed. The next table shows such a classification for all industries combined and for five important industries, and gives not only the number of establishments falling in each group but also the average number of wage earners employed.

INDUSTRY.	Total.	ESTABLISHMENTS EMPLOYING—								
		No wage earners.	1 to 5 wage earners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners.	501 to 1,000 wage earners.	Over 1,000 wage earners.
		NUMBER OF ESTABLISHMENTS.								
All industries	1,020	146	767	83	17	4	3			
Bread and other bakery products.....	92	17	71	3			1			
Butter, cheese, and condensed milk.....	95	9	84	2

Printing and publishing.....	592	72	300	16	4					
All other industries.....	288	34	196	44	11	2	1			
AVERAGE NUMBER OF WAGE EARNERS.										
All industries	3,602		1,456	835	517	310	484			
Bread and other bakery products.....	296		134	19			133			
Butter, cheese, and condensed milk.....	139		114	25						
Flour-mill and gristmill products.....	285		162	96	27					
Lumber and timber products.....	451		106	43	22	149	131			
Printing and publishing.....	825		538	178	109					
All other industries.....	1,616		402	474	359	161	220			
PER CENT OF AVERAGE NUMBER OF WAGE EARNERS.										
All industries	100.0		40.4	23.2	14.4	8.6	13.4			
Bread and other bakery products.....	100.0		46.9	6.6			46.5			
Butter, cheese, and condensed milk.....	100.0		82.0	18.0						
Flour-mill and gristmill products.....	100.0		56.8	33.7	9.5					
Lumber and timber products.....	100.0		23.5	9.5	4.9	33.0	29.0			
Printing and publishing.....	100.0		65.2	21.6	13.2					
All other industries.....	100.0		24.9	29.3	22.2	10.0	13.6			

The per cent distribution of the number of establishments is not shown in this table; of the 1,020 establishments reported for all industries, 89.5 per cent employed no wage earners or from 1 to 5 wage earners each, while only 3 establishments employed over 100 wage earners each.

Of the total number of wage earners, 40.4 per cent were in establishments employing from 1 to 5 wage earners each. The creamery and the printing and publishing industries are the leading industries in this group. The group of establishments employing from 6 to 20 wage earners reported 23.2 per cent of the total number of wage earners, and the 3 establishments which employed over 100 wage earners each reported 13.4 per cent of the total.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of

the different classes of expenses going to make up the total.

The following table shows, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

INDUSTRY.	PER CENT OF TOTAL EXPENSES REPORTED.			
	Salaries.	Wages.	Materials.	Miscellaneous expenses.
All industries	8.9	14.6	72.7	8.9
Bread and other bakery products.....	3.0	15.3	73.1	8.6
Butter, cheese, and condensed milk.....	1.7	4.4	90.7	3.2
Flour-mill and gristmill products.....	1.4	3.2	91.1	4.3
Lumber and timber products.....	3.6	33.6	39.0	23.7
Printing and publishing.....	12.2	35.6	32.9	19.2
All other industries.....	6.3	25.6	56.0	12.2

This table shows that, for all industries combined, 72.7 per cent of the total expenses was incurred for

materials, 18.5 per cent for services—that is, salaries and wages—and but 8.9 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries.

Engines and power.—The following table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

POWER.	NUMBER OF ENGINES OR MOTORS.			HORSEPOWER.			PER CENT DISTRIBUTION OF HORSEPOWER.		
	1909	1904	1899 ¹	1909	1904	1899 ¹	1909	1904	1899

Rented.....	324	(²)	(²)	1,686	191	112	9.5	1.7	1.0
Electric.....	324	(²)	(²)	1,683	181	100	9.5	1.6	0.8
Other.....				3	10	12	(²)	0.1	0.1
Electric motors..	346	23	7	2,084	339	234	100.0	100.0	100.0
Run by current generated by establishment.....	22	23	7	401	153	134	19.2	46.0	57.3
Run by rented power.....	324	(²)	(²)	1,683	181	100	80.8	53.4	42.7

¹ Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.
² Not reported.

³ Less than one-tenth of 1 per cent.

The table indicates that the increase in primary power was principally in power generated by steam. Electric power also shows a large increase, while water power shows a decrease. The more general

use of gas engines is shown, the number of such engines being 366 in 1909, as compared with 186 in 1904 and 158 in 1899. The number of motors run by rented power was not reported in 1904 and 1899, hence comparative figures are not available for the two earlier censuses. The horsepower furnished by electric motors run by rented power increased from 181 in 1904 to 1,683 in 1909. In 1904, 98.3 per cent of the total horsepower was owned by the establishments reporting, while in 1909 only 90.5 per cent was so reported. During the same period the proportion of rented electric horsepower increased from 1.6 per cent to 9.5 per cent. The horsepower developed by electric motors run by current generated in the manufacturing establishments reporting increased from 134 in 1899 to 158 in 1904 and 401 in 1909.

Fuel.—Closely related to the question of kind of power employed is that of the fuel used in generating this power, or otherwise as material in the manufacturing processes. Because a large amount of fuel is consumed in the manufacture of gas, it is included in addition to the five important industries in the following table, which shows the quantity of each kind of fuel used in 1909:

INDUSTRY.	Anthracite coal (tons).	Bituminous coal (tons).	Coke (tons).	Wood (cords).	Oil, including gasoline (barrels).	Gas (1,000 feet).
All industries.....	2,744	102,547	3,960	4,030	19,239	106,436
Bread and other bakery products.....	808	881	374	1,172	121	1,477
Butter, cheese, and condensed milk.....	27	5,230			111	32
Flour-mill and gristmill products.....	522	26,702		9	1,681	100,000
Gas, illuminating and heating.....	22	4,720	3,129		15,238

Printing and publishing.....	632	1,490	23	318	960	2,241
All other industries.....	733	60,760	434	2,531	957	2,682

NOTE.—In addition, there was 1 ton of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products which do not appear on the general schedule. Certain data as to the products for three important industries of South Dakota are here presented.

Flour-mill and gristmill products.—Wheat is the principal agricultural crop of South Dakota, and naturally flour-mill and gristmill products ranked first among its manufactures. The following tabular statement gives the quantity and value of products for the last three census years:

PRODUCT.	1909	1904	1899
Products, total value.....	\$6,208,216	\$6,519,364	\$3,208,532
Wheat flour:			
White—			
Barrels.....	962,840	1,142,803	897,026
Value.....	\$5,041,149	\$5,360,123	\$2,043,678
Graham—			
Barrels.....	5,446	5,219	(¹)
Value.....	\$26,648	\$23,242	(¹)
Corn meal and corn flour:			
Barrels.....	6,845	23,308	14,652
Value.....	\$23,413	\$49,571	\$23,480
Rye flour:			
Barrels.....	2,579	2,835	2,744
Value.....	\$12,022	\$11,414	\$8,651
Buckwheat flour:			
Pounds.....	219,675	26,000	(¹)
Value.....	\$7,199	\$1,010	(²)
Barley meal:			
Pounds.....	361,099	40,000	347,000
Value.....	\$7,500	\$700	\$4,980
Feed:			
Tons.....	9,849	16,713	14,091
Value.....	\$245,786	\$286,438	\$185,130
Offal:			
Tons.....	44,272	55,845	33,808
Value.....	\$839,022	\$789,371	\$341,573
All other products	\$5,477	\$490	\$3,040

¹ Included in figures for white wheat flour.² Figures not available.

There was a decrease in the value of products between 1904 and 1909, due to a falling off of 6 per cent in the value and of 15.7 per cent in the quantity of white flour manufactured. The figures for buckwheat flour and barley meal show notable increases for the same five-year period, the quantity of the former product increasing more than eightfold and of the latter product ninefold.

Butter.—The quantity and value of products for 1909, 1904, and 1899 are given in the next table.

The value of solid packed butter represented 90.3 per cent in 1909, 97 per cent in 1904, and 94.6 per cent in 1899 of the total value of products. From 1899 to 1904 this class of product increased decidedly both in quantity and in value, while from 1904 to 1909, notwithstanding a marked decrease in quantity, there was an increase in the value.

The quantity and value of skimmed milk sold shows a very large decrease from census to census. This is due to the radical change which has taken place in the creamery industry. Formerly whole milk was brought to the creamery while at present the cream is separated largely on the farm and sold as such.

PRODUCT.	1909	1904	1899
Products, total value	\$2,685,511	\$2,182,653	\$1,199,493
Butter:			
Packed solid—			
Pounds.....	8,830,010	10,835,596	6,110,726
Value.....	\$2,424,897	\$2,116,900	\$1,134,223
Prints and rolls—			
Pounds.....	615,598	222,854	61,381
Value.....	\$173,516	\$44,423	\$14,739
Cream sold:			
Pounds.....	390,108	2,140	1,596
Value.....	\$43,147	\$215	\$1,070
Skimmed milk:			
Pounds.....	1,116,882	4,491,814	9,690,340
Value.....	\$1,583	\$7,903	\$8,070
All other products	\$42,398	\$13,212	\$40,786

¹ Does not include 1 cheese establishment.

Printing and publishing.—The progress of the newspaper and periodical branch of the industry is indicated in the following statement, which shows the number and aggregate circulation per issue for the different classes of publications for the years 1909, 1904, and 1899:

PERIOD OF ISSUE.	NUMBER OF PUBLICATIONS.			AGGREGATE CIRCULATION PER ISSUE.		
	1909	1904	1899	1909	1904	1899
Total.....	402	302	221	485,101	330,705	232,188
Daily.....	19	16	16	40,153	21,910	16,403
Sunday.....	4	5	3	23,526	11,350	(¹)
Semiweekly.....	3	5	1	4,409	6,850	1,600
Weekly.....	360	263	189	277,127	198,694	151,438
Monthly.....	11	11	9	23,759	58,600	34,409
All other classes.....	5	2	3	110,145	33,391	28,265

¹ Included in circulation of dailies.

In 1909 the aggregate circulation per issue of the newspapers and periodicals of the state was 485,101, which represents an increase of 46.7 per cent over the corresponding figure for 1904. Weekly publications have a greater circulation than all other periodicals combined; out of a total of 402 newspapers and periodicals published in 1909, 360, or 89.6 per cent, were published weekly. The proportion which the weeklies formed of the total number in 1904 was 87.1 per cent, while in 1899 it was 85.5 per cent. There was an increase of three in the number of dailies from 1904 to 1909, but during the same period the combined average circulation of all dailies increased over 100 per cent.

Laundries.—Statistics for steam laundries are not included in the general tables. In 1909 there were 28 such establishments in the state of South Dakota, 4 of which were located in Aberdeen and 3 in Sioux Falls.

The following statement summarizes the statistics:

Number of establishments.....	28
Persons engaged in the industry.....	447
Proprietors and firm members.....	33
Salaried employees.....	28
Wage earners (average number).....	386
Primary horsepower.....	519
Capital.....	\$336,276
Expenses.....	313,492
Services.....	190,830
Materials.....	81,770
Miscellaneous.....	40,892
Amount received for work done.....	423,092

Sixteen establishments were operated by individuals, 4 by corporations, and 8 by general partnerships. Nine establishments had receipts for the year's business of less than \$5,000; 9, receipts of \$5,000 but less than \$20,000; and 10, receipts of \$20,000 but less than \$100,000.

The number of wage earners employed each month and the per cent which this number represented of the greatest number employed in any month were as follows:

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	352	85.0	July.....	410	99.0
February.....	352	85.0	August.....	414	100.0
March.....	356	86.0	September.....	406	98.1
April.....	369	89.1	October.....	398	96.1
May.....	384	92.8	November.....	395	95.4
June.....	394	95.2	December.....	397	95.9

The different kinds of primary power, the number of engines, and the horsepower used in 1909 are shown in the following tabular statement:

KIND.	Number of engines.	Horsepower.
Primary power, total.....		519
Owned.....	26	396
Steam engines.....	19	360
Gas engines.....	7	36
Rented—Electric.....	23	123

The kind and amount of fuel used are shown in the following tabular statement:

KIND.	Unit.	Quantity.
Anthracite coal.....	Tons.....	19
Bituminous coal.....	Tons.....	6,265
Wood.....	Cords.....	1
Oil.....	Barrels.....	215
Gas.....	1,000 feet.....	5,236

Custom sawmills and gristmills.¹—Statistics for custom sawmills and gristmills are not included in the general tables, but are presented in the following summary:

Number of establishments.....	4
Persons engaged in the industry.....	4
Proprietors and firm members.....	3
Wage earners (average number).....	1
Primary horsepower.....	82
Capital.....	\$15,500
Expenses.....	29,637
Services.....	400
Materials.....	228,630
Miscellaneous.....	607
Value of products.....	236,102

¹ Includes 1 custom mill.

² Includes estimate of all grain ground. A similar estimate for value of lumber sawed by custom sawmills is impracticable.

STATISTICS OF MANUFACTURES.

671

CHAPTER 6.

MINES AND QUARRIES.

Introduction.—The present chapter contains a complete statement of the statistics of all mining industries, which include all mines, quarries, and wells in the state of South Dakota for the year 1909, as shown by the Thirteenth Census.

A brief explanation of the scope of the census of mining industries and of the terms used, in so far as the usage differs from that followed in the census of manufactures, is presented below in order to prevent any misinterpretation of the statistics.

The explanations here given show the usage of the mining census generally, though some of the special rules have obviously no relation to particular states in which the industries referred to do not exist.

Scope of census.—The Thirteenth Census covered all classes of mines, quarries, and petroleum and gas wells that were in operation during any portion of the year 1909, both those which were producing and those whose operations were confined to development work. Mines, quarries, or wells that were idle during the entire year 1909 were omitted from the canvass. The following operations were likewise omitted from the canvass: Prospecting; the digging or dredging of sand and gravel for the construction of roads and for building operations; the production of mineral waters; and the operation of small bituminous coal banks producing less than 1,000 tons annually. Where the mineral products are not marketed in their crude condition, but are dressed or washed at the mine or quarry, the statistics of mining cover the entire work of obtaining the crude material and its preparation for the market.

Period covered.—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for enterprises which began or discontinued business during the year.

Number of operators.—As a rule, the unit of enumeration was the "operator." Every individual, firm, or corporation was required to furnish one report for all mines, quarries, or wells which were operated under the same management or for which one set of books of account was kept. Separate reports were obtained for all properties operated in different states, even where they were owned by the same operator. Likewise, where the operations of one individual, firm, or corporation covered more than one class of mines and quarries, such as coal, iron, limestone, etc., a separate report was received for each industry.

Number of mines, quarries, and wells.—This figure represents the total number of mines and quarries in operation or in the course of development at any time during the calendar year 1909, or the business year that corresponds most nearly to that calendar year, and the number of completed petroleum and natural gas wells in operation on December 31, 1909.

In most mining and quarrying industries the number of mines or quarries varies but little from the number of operators.

Expenses of operation and development.—A certain amount of development work is incidental to the operation of every mine. The expenses reported for producing mines include the cost both of operation and of development work which was done in connection with operation.

Wages.—The amount shown as wages includes only the compensation of regular wage earners hired by the day, week, or month, or under the piecework system.

Supplies and materials.—This item includes the cost of lumber and timber used for repairs, mine supports, track ties, etc.; iron and steel for blacksmithing; rails, frogs, sleepers, etc., for tracks and repairs; renewals of tools and machinery and materials for repairs; and supplies, explosives, oil, etc., as well as the cost of fuel and the rent of power. The schedule called only for the cost of such supplies and materials as had been used during the year covered by the report. Accurate figures, however, could be furnished only in those cases where the operators kept an account of supplies and materials used, or had an inventory made of all in stock at the beginning and at the end of the year. Such a system of accounting is far from general among mine operators, and there is reason to believe that in many cases the reported cost of supplies and materials covered all purchased during the year rather than those used during the year. The crude product of some operators was purchased by others for further dressing or refining; the cost of such materials is shown separately in the general table.

Capital.—The census schedule required every operator to state the total amount of capital invested in the enterprise on the last day of the business year reported, as shown by his books. There is, however, a great diversity in the methods of bookkeeping in use by different operators. As a result, the statistics for capital lack uniformity. Some of the figures reported apparently represent capital stock at face value; others include large investments in mineral lands which are not at present being actively mined, but are held in reserve; still others may include expenditures for unproductive mining ventures in no way related to the operations carried on during the census year.

Persons engaged in mining industries.—The statistics of the number of operators and officials, clerks, and wage earners, are based on the returns for December 15, or the nearest representative day. The reported number of wage earners includes overseers and foremen performing work similar to that of the men over whom they have charge; those whose duties are wholly supervisory are classed as superintendents and managers. Because of the common practice of shutting down mines at frequent intervals, it is impossible to ascertain with any satisfactory degree of accuracy the average number of employees—that is, the number who, if continuously employed, would be required to produce the actual output of the year.

Value of products.—Statistics of the value of mineral products were obtained by the Bureau of the Census in cooperation with the United States Geological Survey, but the two bureaus follow different methods in presenting these statistics. The Geological Survey shows separately the value of each mineral product, whereas the Bureau of the Census presents the value of products of each mining industry. The value of products given for a mining industry often includes the value of some products not covered by the industry designation. The crude product of metalliferous mines may include varying combinations of metals, such as gold, silver, copper, lead, zinc, and iron. Similarly, the total value of all products of the granite quarries is not identical with the value of the total output of granite, but may include the value of some marble or other stone quarried in connection with the principal product.

The value of products for 1909 in most cases represents the value of the products marketed during that year, not the value of those mined during that year.

MINING IN SOUTH DAKOTA.

Summary.—Statistics for all mining enterprises in the state of South Dakota are presented in Table 7, which gives statistics for all industries combined and, with the exception of the petroleum and natural gas industry, for producing enterprises separately in all cases where the statistics could be given without disclosing the operations of an individual enterprise. Statistics for nonproducing gold and silver enterprises are also given separately.

The gross value of the products of the mining industry in South Dakota in 1909 amounted to \$6,432,417. Deducting from this amount, \$55,139, the value of the gold and silver ore produced by some establishments and used as material by others, leaves \$6,377,278 as the net value of the products. Of this amount, gold and silver deep mines contributed \$6,065,831, or 95.1 per cent.

In the operation of placer gold mines and in the combined total for the industries included in column headed "All other" the expenses of operation and development exceeded the value of the products. This was due in part to unprofitable mining ventures and in part to expenditures for development work which added to the value of the mining properties.

Character of organization.—Table 1 classifies the producing mining operations of the state under form of organization, distinguishing corporations from individual owners and firms, while Table 2 gives further details for incorporated enterprises distinguished from those which are unincorporated. Out of a total of 39 operators, 19 were corporations. These corporations reported 96.6 per cent of the total value of products and employed 95.3 per cent of all wage earners.

Value of products.....	6,210,563	221,854

Size of enterprises.—In Table 3 the producing mining enterprises of the state are classified according to the number of wage earners employed per enterprise or operating unit. Of the 3,866 wage earners reported by all enterprises, 3,303, or 85.4 per cent, were employed by the four largest enterprises.

Over 50.....	4	30.8	3,256	93.9

Prevailing hours of labor.—In Table 4 all producing enterprises, except those engaged in the production of petroleum and natural gas, in which no wage earners were employed, have been classified according to the prevailing hours of labor per day in each enterprise or operating unit. The table shows the percentage of the total number of enterprises falling in each group, and also a per cent distribution in which each enter-

STATISTICS OF MINES AND QUARRIES.

677

prise has been given a weight according to the total number of wage earners employed December 15, 1909, or the nearest representative day. It should be borne in mind that this latter distribution does not show the exact proportion of the total number of wage earners working the specified number of hours per day, since, in some cases, a part of the employees worked a greater or less number of hours than those generally prevailing in the enterprise.

10 hours.....	2	15.4	6.5

¹ Exclusive of petroleum and natural gas.

Duplication between manufactures and mining.—In the production of granite, sandstone, and gypsum, some of the operators subjected the products obtained to certain manufacturing processes on the premises before marketing. These enterprises have been included in the statistics both for manufactures and for mining. As a result, the combined value of products for the manufacturing and mining industries in South Dakota involves a duplication of \$122,244.

Engines and power.—As shown by Table 5, the aggregate horsepower employed in producing enterprises was 15,648, of which 11,951 was developed by engines and water wheels owned by the enterprises using them and 3,697 horsepower by electric motors operated by purchased current.

Comparison of mining industries: 1902-1909.—In order to make comparisons between 1909 and 1902 it is necessary to omit from the 1902 figures, as given in the mines and quarries report for that year, statistics for the production of cement and enterprises operated by governmental institutions; and to add to the 1909 statistics, figures for the production of lime, which were omitted from the census of mines and quarries in 1909. Such items as are comparable for the two years are presented in Table 6.
